

APPLICATION PROGRAM INFORMATION

Dry Contact 4CH Sensor

M/S04.1

KNX/EIB-BUS

Document Version: 1.0, Date: 15. April.2015

This document describes the M/S04.1-functions with the KNX-product- application:

Dry Contact 4CH Sensor (V1.1).vd5

This product can be used with the optional HDL temperature sensor TTS/APR 1.0, which is specified in its Technical Product Information V1.0, date03. April 2015

Compiled by (english name): Mr. He

- C. Function description
- D. Communication objects

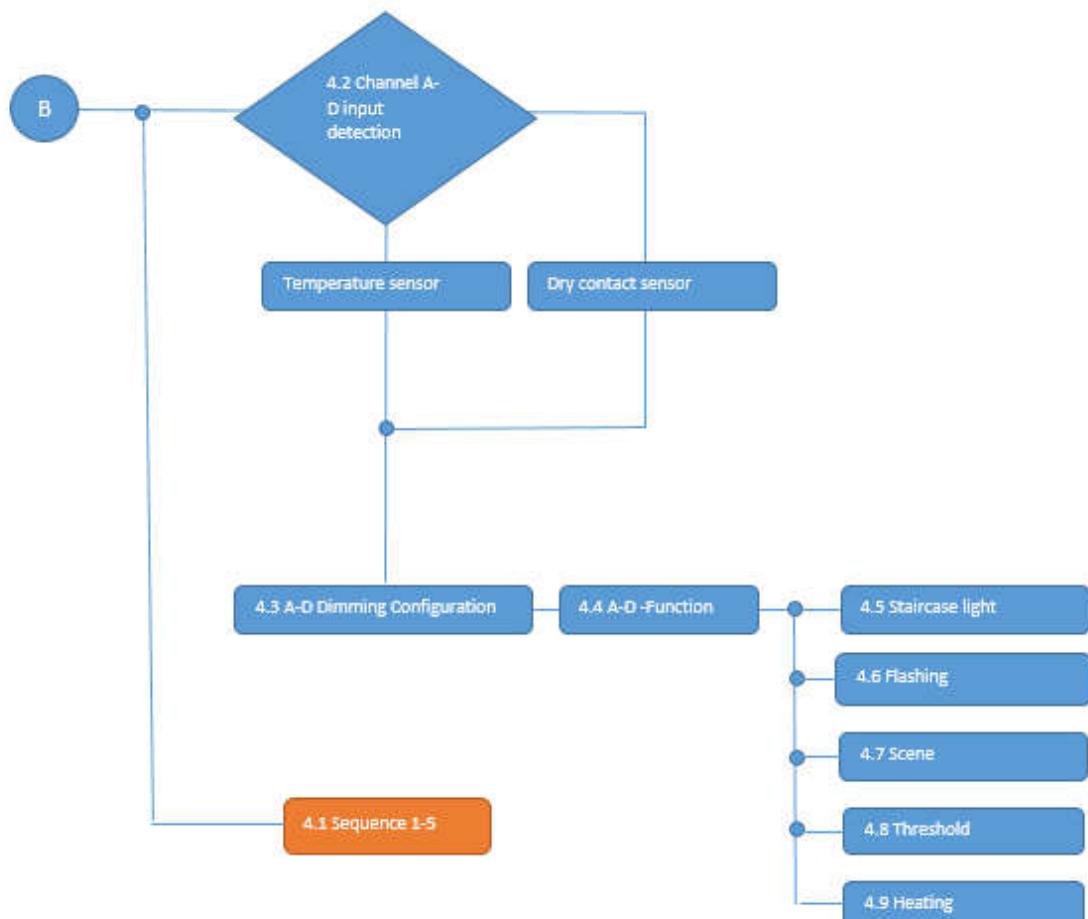

A.

The Dry Contact 4CH Sensor is used to operate building functions. Its design enables it to be mounted in a 60mm wiring box. This manual contains the programming of this device.

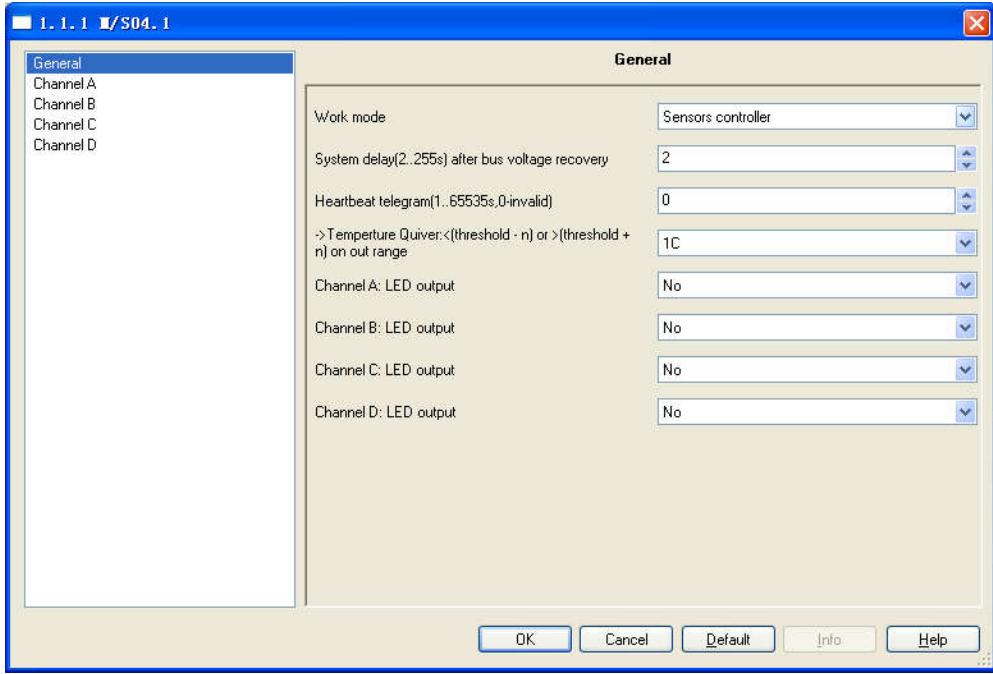

B.

C.

1.0_General/Channel A-D Work mode/ 2.0_Sensors controller			
			
No.	ETS-Parameter	Range (default)	Description
1	Work mode	- (Sensors controller) - Logical controller - Dimming controller	<i>Set the work mode-sensors controller</i>
2	System delay (2-255s) after bus voltage recovery	(2)..255s	<i>Set the delay time for the device to work after power on, the range is 2-255s</i>
3	Heartbeat telegram (1..65535s,0-invalid)	(0)..65535s	<i>If the parameter is set to nonzero, the device will send a telegram data (alternately between 0 and 1) cyclically after time out; if it's set to 0, this function is invalid.</i>
4	Temperature Quiver: <(threshold - n) or >(threshold + n) on out range	0C, (1C)..10C	<p><i>The effective range is larger than threshold1 and less than threshold2 The setting range is larger than the (threshold1-n) and less than (threshold2+n).</i></p> <p><i>Suppose the temperature is in the effective range, when it changes within the setting range, the status will not change. Suppose the temperature is in the effective range, when it changes out of the setting range, the status will change. Suppose the temperature is not in the effective range, only when the temperature changes into the effective</i></p>

			<i>range, the status will change.</i>
5	Channel A: LED output Channel B: LED output Channel C: LED output Channel D: LED output	(NO), YES	<i>If select YES, it will appear a setting page of the "LED output A". That page is used to set the LED state parameter. Channel B,C,D outputs are same as Channel A.</i>

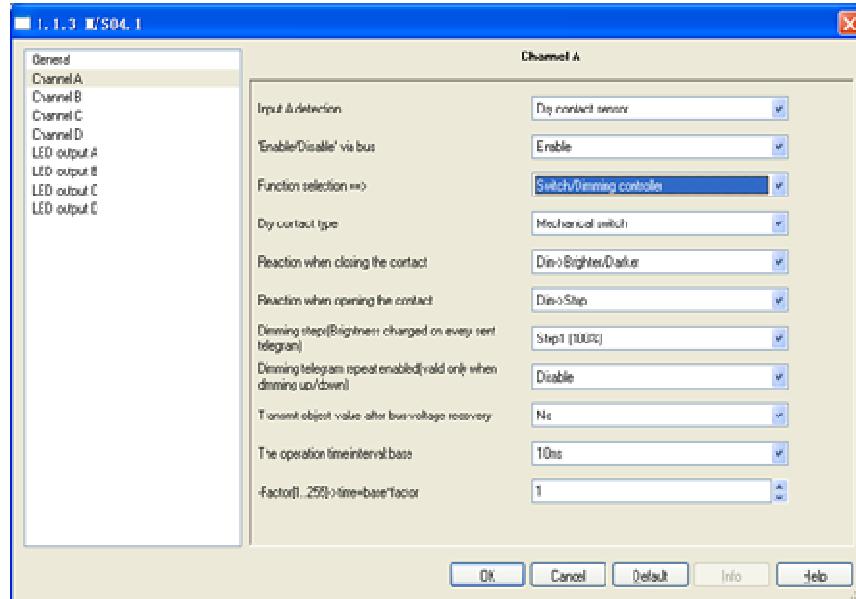

2.1_Channel A-D, Input detection

No.	ETS-Parameter	Range (default)	Description
6	Input A detection	- -(No detection) -Dry contact sensor -Temperature sensor	<i>Function selection</i>
2.1.1_Dry contact sensor			
7	Enable/Disable via bus	(Disable), Enable	<i>If select 'Enable', you can enable/disable the channel A via bus</i>
8	Function selection==>	- (Switch controller) -Switch / Dimming controller -Shutter controller -Flexible controller -Scene controller -Sequence controller -Percentage controller -Threshold controller -String (14bytes) controller -Forced position controller -Counter controller -Combination controller	<i>Select the output control function you need.</i>
2.1.1.1_Switch controller			
9	Dry contact type	- (Mechanical switch) -Electronic switch	<i>Mechanical switch: it has two states, "OFF" and "ON". You can set commands to each</i>

			<i>state.(act as a bi-stable button)Electronic Switch: act as a mono-stable button.</i>
2.1.1.1.1_Mechanical switch			
10	Reaction when closing the contact	-Unchanged -(ON) -OFF -Toggle -Stop cyclic telegram	Unchanged: It will send the same value as the last time. ON: The value it will send is 1. OFF: The value it will send is 0. Toggle: It will invert the last time's value then send itout. Stop cyclic telegram: This is mainly used for the following cycle settings.
11	Reaction when opening the contact	-Unchanged -ON -(OFF) -Toggle -Stop cyclic telegram	Unchanged: It will send the same value as the last time. ON: The value it will send is 1. OFF: The value it will send is 0. Toggle: It will invert the last time's value then send itout. Stop cyclic telegram: This is mainly used for the following cyclic settings.
12	Delay for ON of switch(0..255s)	(0)..255	Set the delay time for switch on
13	Delay for OFF of switch(0..255s)	(0)..255	Set the delay time for switchoff
14	Object value inverted when receiving from bus	-(NO) -YES	NO: It will not invert the receiving value YES: It will invert the receiving value
15	Cyclic telegram of object	-(NO) -if switch is "ON" -if switch is "OFF" -Always transmission	NO: There is not cyclic function. If switch is ON: It will send out the telegram cyclically when the switch is on. If switch is OFF: It will send out the telegram cyclically when the switch is off. Always transmission: No matter the switch is on or off, it will send out the telegram cyclically.
16	Transmit object value after bus voltage recovery	NO,(YES)	Whether transmit object value after bus voltage recovery.
17	The operation time interval: base	-(10ms) -100ms -1sec -1min -1hour	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.
18	Factor[1..255]->time=base*factor	(1)...255	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.

2.1.1.1.2_Electronic switch			
19	The normally contact status is	Closed/(Open)	<i>Set the dry contact's normal status when have nooperation.</i> Closed: The dry contact's normal status is closed. Open: The dry contact's normal status is open
20	Reaction when short button operation	-Invalid -Unchanged -ON -OFF -(Toggle)	<i>Set the output control type when short press the button</i>
21	Reaction when long button operation	- (Invalid) - Unchanged - ON - OFF - Toggle	<i>Set the output control type when long press the button</i>
22	Long button time after	0.2s..(1s)..60s	<i>Set time for long-press, define the long press by end-user</i>
23	Delay for ON of switch(0..255s)	(0)..255	<i>Set the delay time for switch on</i>
24	Delay for OFF of switch(0..255s)	(0)..255	<i>Set the delay time for switch off</i>
25	Object value of short button inverted when receive from bus	- (NO) - YES	NO: It will not invert the receiving value YES: It will invert the receiving value
26	Object value of long button inverted when receive from bus	- (NO) - YES	NO: It will not invert the receiving value YES: It will invert the receiving value
27	The operation time interval: base	- (10ms) - 100ms - 1sec - 1min - 1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base * factor.</i>
28	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base * factor.</i>

2.1.1.2_Switch/Dimming controller

No.	ETS-Parameter	Range (default)	Description
29	Dry contact type	-{(Mechanical switch) -Electronic switch}	<i>Function selection</i>

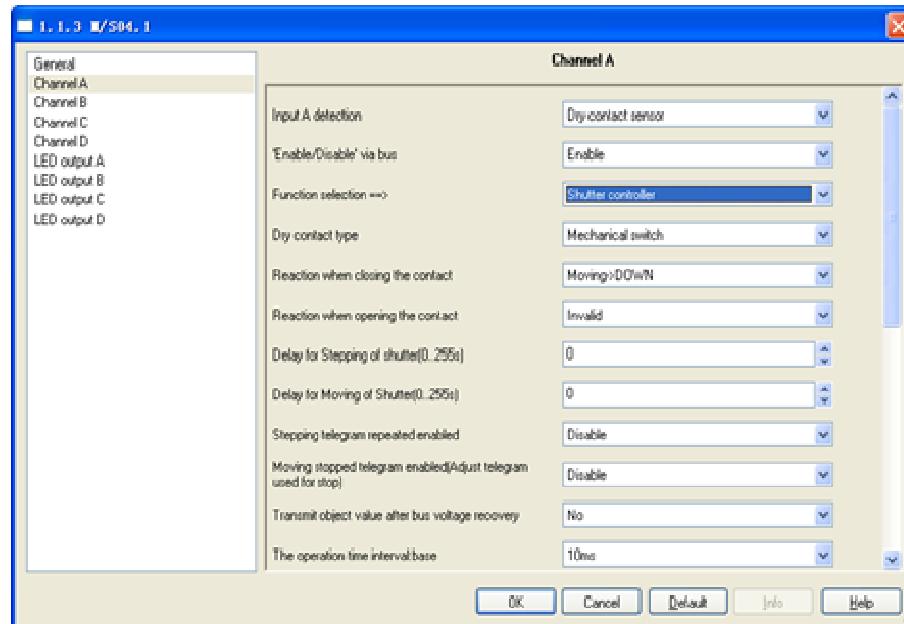

2.1.1.2.1_Mechanical switch

30	Reaction when closing the contact	-Invalid -Dim->Brighter -Dim->Darker -(Dim-> Brighter/Darker) -Dim-> Stop	Invalid: no action when closing the dry contact. Dim->Brighter: When closing the dry contact, it will increase the brightness. Dim->Darker: When closing the dry contact, it will decrease the brightness. Dim-> Brighter/Darker: When closing the dry contact, it will increase/decrease the brightness. Dim->Stop: when closing the dry contact, it will stop dimming.
31	Reaction when opening the contact	-Invalid -Dim->Brighter -Dim->Darker -Dim-> Brighter/Darker -(Dim-> Stop)	Invalid: no action when opening the dry contact. Dim->Brighter: When opening the dry contact, it will increase the brightness. Dim->Darker: When opening the dry contact, it will decrease the brightness. Dim-> Brighter/Darker:

			<p><i>When opening the dry contact, it will increase/decrease the brightness.</i></p> <p>Dim->Stop:when opening the dry contact, it will stop dimming.</p>
32	Dimming steps (Brightness changed on every sent telegram)	-(Step1 (100%)) -Step2 (50%) -Step3 (25%) ..Step7 (1.56%)	<i>Set the dimming values when sends out the dimming telegram</i>
33	Dimming telegram repeat enabled (valid only when dimming up/down)	(Disable), Enable	<i>Whether repeat sendingdimming telegram.</i> Disable: do not repeat sendingdimming telegram. Enable: when dimming up/down will repeat sending dimming telegram.
34	Dimming telegram repeated time	0.2s..(0.4s)..60s	<i>The interval of sending dimming telegram</i>
35	Dimming telegram repeated number (1..255,0-unlimited)	(0)..255	<i>The repeat times of sending dimming telegram</i>
36	Transmit object value after bus voltage recovery	-(NO) -YES	<i>Whether transmit object value after bus voltage recovery.</i>
37	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
38	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
2.1.1.2.2_Electronic switch			
39	The normally contact status is	Closed/(Open)	<i>Set the dry contact's normal status when have nooperation.</i> Closed: The dry contact'snormal status is closed. Open: The dry contact'snormal status is open
40	Reaction when short button operation	-Invalid -Unchanged -ON -OFF -(Toggle)	<i>Set the output control type when short press the button</i>
41	Reaction when long button operation	-Invalid -Dim->Brighter -Dim->Darker -(Dim-> Brighter/Darker)	<i>Set the output control type when long press the button</i>
42	Long button time after	0.2s..(1s)..60s	<i>Set time for long-press, define the long press by end-user</i>
43	Delay for ON of switch(0..255s)	(0)..255	<i>Set the delay time for switchon</i>

44	Delay for OFF of switch(0..255s)	(0)..255	<i>Set the delay time for switchoff</i>
45	Dimming steps (Brightness changed on every sent telegram)	-{Step1 (100%)} -Step2 (50%) -Step3 (25%) ..Step7 (1.56%)	<i>Set the dimming values when sends out the dimming telegram</i>
46	Dimming telegram repeated enable	(Disable), Enable	<i>Whether repeat sendingdimming telegram.</i> Disable: do not repeat sendingdimming telegram. Enable: when dimming up/down will repeat sending dimming telegram.
47	Dimming telegram repeated time	0.2s..(0.3s)..60s	<i>The interval of sending dimming telegram</i>
48	Dimming telegram repeated number (1..255,0-unlimited)	(0)..255	<i>The repeat times of sending dimming telegram</i>
49	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
50	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>

2.1.1.3_Shutter controller

No.	ETS-Parameter	Range (default)	Description
51	Dry contact type	-{Mechanical switch} -Electronic switch	<i>Function selection</i>
2.1.1.3.1_Mechanical switch			
52	Reaction when closing the	-Invalid	<i>Invalid: no action when</i>

	contact	<ul style="list-style-type: none"> -Stepping->Increase -Stepping->Decrease -Stepping->Toggle -Stepping->Repeat telegram stopped -Moving->UP -(Moving->DOWN) -Moving->Toggle 	<p><i>closing the dry contact.</i></p> <p>Stepping->Increase: When closing the dry contact, it will increase the angle of louver.</p> <p>Stepping-> Decrease: When closing the dry contact, it will decrease the angle of louver.</p> <p>Stepping-> Toggle: When closing the dry contact, it will increase/decrease the angle of louver.</p> <p>Stepping->Repeat telegram stopped: When closing the dry contact, it will stop repeat sending stepping telegram</p> <p>Moving-> UP: When closing the dry contact, it will send move up telegram</p> <p>Moving-> Down: When closing the dry contact, it will send move down telegram</p> <p>Moving-> Toggle: When closing the dry contact, it will send move up/down telegram</p>
53	Reaction when opening the contact	<ul style="list-style-type: none"> -(Invalid) -Stepping->Increase -Stepping->Decrease -Stepping->Toggle -Stepping->Repeat telegram stopped -Moving->UP -(Moving->DOWN) -Moving->Toggle 	<p>Invalid: no action when opening the dry contact.</p> <p>Stepping->Increase: When opening the dry contact, it will increase the angle of louver.</p> <p>Stepping-> Decrease: When opening the dry contact, it will decrease the angle of louver.</p> <p>Stepping-> Toggle: When opening the dry contact, it will increase/decrease the angle of louver.</p> <p>Stepping->Repeat telegram stopped: When opening the dry contact, it will stop repeat sending stepping telegram</p> <p>Moving-> UP: When opening the dry contact, it will send move up telegram</p> <p>Moving-> Down: When opening the dry contact, it will send move down telegram</p> <p>Moving-> Toggle: When opening the dry contact, it will send move up/down telegram</p>
54	Delay for Stepping of Shutter(0..255s)	(0)..255	Set the delay time for adjusting the angle of louver
55	Delay for Moving of	(0)..255	Set the delay time for the

	Shutter(0..255s)		<i>shutter moving</i>
56	Stepping telegram repeated enabled	-(Disable) -Enable	<i>Whether repeat sending adjusting telegram.</i> Disable: do not repeat sending adjusting telegram. Enable: it will repeat sending the adjusting telegram.
57	Stepping telegram repeated time	(0.2s)..60s	<i>The interval of sending adjusting telegram</i>
58	Stepping telegram repeated number (1...255, 0-unlimited)	(0)..255	<i>The repeat times of sending dimming telegram</i>
59	Moving stopped telegram enabled(Adjust telegram used for stop)	-(Disable) -Enable	<i>Enable/disable the function to auto stop the shutter after moving</i>
60	Moving stopped telegram delay time: base	100ms,(1sec)..1hour	<i>These two parameters are used to set the delay time to stop the shutter after moving, the delay time = base*factor.</i>
61	Factor[1..255]->time=base*factor	(10)...255	<i>These two parameters are used to set delay time to stop the shutter after moving, the delay time = base*factor.</i>
62	Transmit object value after bus voltage recovery	-(NO) -YES	<i>Whether transmit object value after bus voltage recovery.</i> NO: do not transmit object value after bus voltage recovery. YES: it will transmit object value after bus voltage recovery.
63	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
64	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
2.1.1.3.2_Electronic switch			
65	The normally contact status is	Closed/(Open)	<i>Set the dry contact normal status when has no operation.</i>
66	Reaction when short button operation	-Invalid -(Stepping->Increase/STOP) -Stepping->Decrease/STOP -Stepping->Toggle/STOP -Moving->UP -Moving->DOWN -Moving->Toggle	Invalid: no action when short press the button Stepping->Increase/Stop: when short press the button, it will increase/stop the angle of louver. Stepping->Decrease/Stop: when short press the button, it will decrease/stop the angle of louver. Stepping-> Toggle/Stop:

			<p><i>when short press the button, it will toggle/stop the angle of louver.</i></p> <p>Moving-> UP: When short press the button, it will send move up telegram</p> <p>Moving-> Down: When short press the button, it will send move down telegram</p> <p>Moving-> Toggle: When short press the button, it will send move up/down telegram</p>
67	Reaction when long button operation	<ul style="list-style-type: none"> -Invalid -Stepping->Increase/STOP -Stepping->Decrease/STOP -Stepping->Toggle/STOP -Moving->UP -Moving->DOWN -(Moving->Toggle) -Press: Moving->UP, Release: Call short button -Press: Moving->DOWN, Release: Call short button -Press: Moving->Toggle, Release: Call short button 	<p>Invalid: no action when long press the button</p> <p>Stepping->Increase/Stop: when longpress the button, it will increase/stop the angle of louver.</p> <p>Stepping->Decrease/Stop: when long press the button, it willdecrease/stop the angle of louver.</p> <p>Stepping-> Toggle/Stop: when longpress the button, it willtoggle/stop the angle of louver.</p> <p>Moving-> UP: When long press the button, it will send move up telegram</p> <p>Moving-> Down: When long press the button, the shutter will move down</p> <p>Moving-> Toggle: When long press the button, it will send move down telegram</p> <p>Press: Moving->UP, Release: Call short button: When long press the button, it will send move up telegram; when release, it will send the value of short button.</p> <p>Press: Moving->DOWN, Release: Call short button: When long press the button, it will it will send move down telegram; when release, it will send the value of short button.</p> <p>Press: Moving->Toggle, Release: Call short button: When long press the button, it will send move up/down telegram; when release, it will send the value of short button.</p>

68	Long button time after	0.2s..(1s)..60s	<i>Set time for long-press, define the long press by end-user</i>
69	Delay for Stepping of shutter(0..255s)	(0)..255	<i>Set the delay time for adjusting the angle of louver</i>
70	Delay for Moving of shutter(0..255s)	(0)..255	<i>Set the delay time for the shutter moving.</i>
71	Stepping telegram repeated enable	(Disable), Enable	<i>Whether repeat sending adjusting telegram. Disable: do not repeat sending adjusting telegram. Enable: it will repeat sending the adjusting telegram.</i>
72	Stepping telegram repeated time	0.2s..(0.3s)..60s	<i>The interval of sending adjusting telegram</i>
73	Stepping telegram repeated number (1..255,0-unlimited)	(0)..255	<i>The repeat times of sending adjusting telegram</i>
74	Moving stopped telegram enabled (Adjust telegram used for stop)	(Disable), Enable	<i>Enable/disable the function to auto stop the shutter after moving</i>
75	Moving stopped telegram delay time: base	100ms...1sec..1hour	<i>These two parameters are used to set the delay time to stop the shutter after moving, the delay time = base*factor.</i>
76	Factor[1..255]->time=base*factor	1..(10)...255	<i>These two parameters are used to set the delay time to stop the shutter after moving, the delay time = base*factor.</i>
77	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
78	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>

2.1.1.4_Flexible controller

No.	ETS-Parameter	Range (default)	Description
79	Dry contact type	-{(Mechanical switch) -Electronic switch}	<i>Function selection</i>

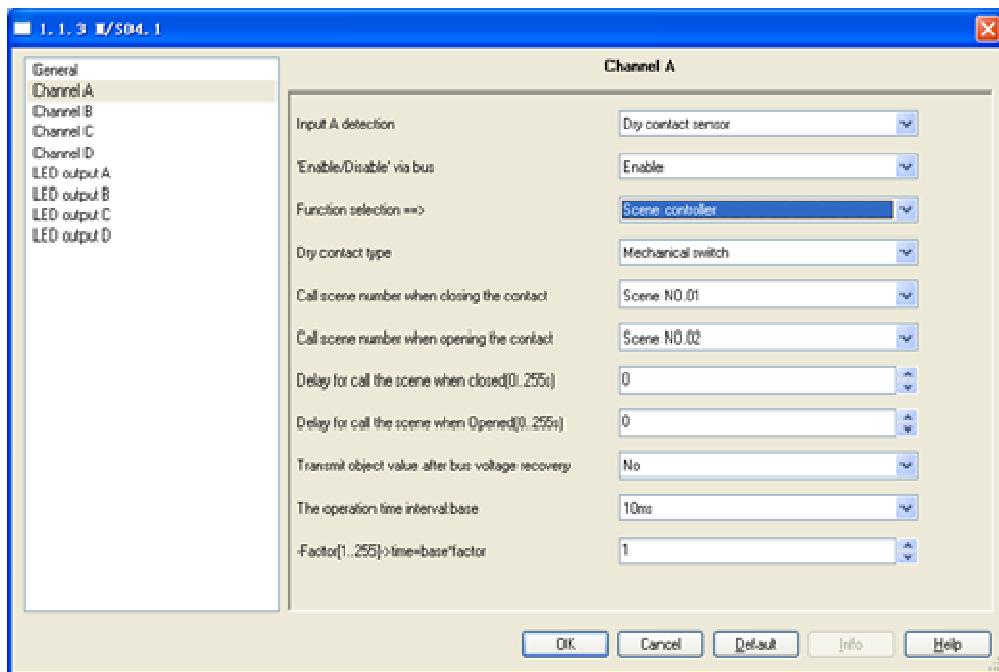

2.1.1.4.1_Mechanical switch

80	Flexible button operation	-Invalid -(Close="toggle") -Open="toggle" -Close="ON" -Open="ON" -Close="ON", Open="ON" -Close="OFF" -Open="OFF" -Close="OFF", Open="OFF" -Close="ON", Open="OFF" -Close="OFF", Open="ON"	Invalid: the dry contact is invalid. Close="Toggle": when closing, it will invert the last time's value then send it out Open="Toggle": when opening, it will invert the last time's value then send it out Close="ON": when closing, the value it will send is 1 Open="ON": when opening, the value it will send is 1 Close="ON", Open="ON": the value it will send is always 1 Close="OFF": when closing, the value it will send is 0 Open="OFF": when opening, the value it will send is 0 Close=" OFF", Open=" OFF": the value it will send is always 0 Close=" ON", Open=" OFF": when closing, the value it will send is 1; when opening, the value it will send is 0 Close=" OFF", Open=" ON": when closing, the value it will send is 0; when opening, the value it will send is 1
81	Transmit object value after bus	-(NO)	<i>Whether transmit object</i>

	voltage recovery	-YES	<i>value after bus voltage recovery.</i> NO: do not transmit object value after bus voltage recovery. YES: will transmit object value after bus voltage recovery.
82	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
83	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
2.1.1.4.2_Electronic switch			
84	The normally contact status is	Closed/(Open)	<i>Set the dry contact's normal status when have no operation.</i> Close: the contact's normal status is closed. Open: the contact's normal status is open.
85	Flexible button operation	Invalid -(Press="toggle") Release="toggle" Press ="ON" Release ="ON" Press ="ON", Release ="ON" Press =="OFF" Release ="OFF" Press ="OFF", Release ="OFF" Press ="ON", Release ="OFF" Press ="OFF", Release ="ON"	<i>Invalid: the dry contact is invalid.</i> Press="Toggle": when press, it will invert the last time's value then send it out Release="Toggle": when release, it will invert the last time's value then send it out Press ="ON": when press, the value it will send is 1 Release ="ON": when release, the value it will send is 1 Press="ON", Release ="ON": the value it will send is always 1 Press="OFF": when press, the value it will send is 0 Release="OFF": when release, the value it will send is 0 Press=" OFF", Release=" OFF": the value it will send is always 0 Press=" ON", Release=" OFF": when press, the value it will send is 1; when release, the value it will send is 0 Press=" OFF", Release=" ON": when press, the value it will send is 0; when release, the value it will send is 1
86	The operation time interval:	(10ms)..1hour	<i>These two parameters are</i>

	base		used to set the time interval of repeat operation, the time interval = base*factor.
87	Factor[1..255]->time=base*factor	(1)...255	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.

2.1.1.5_Scene controller

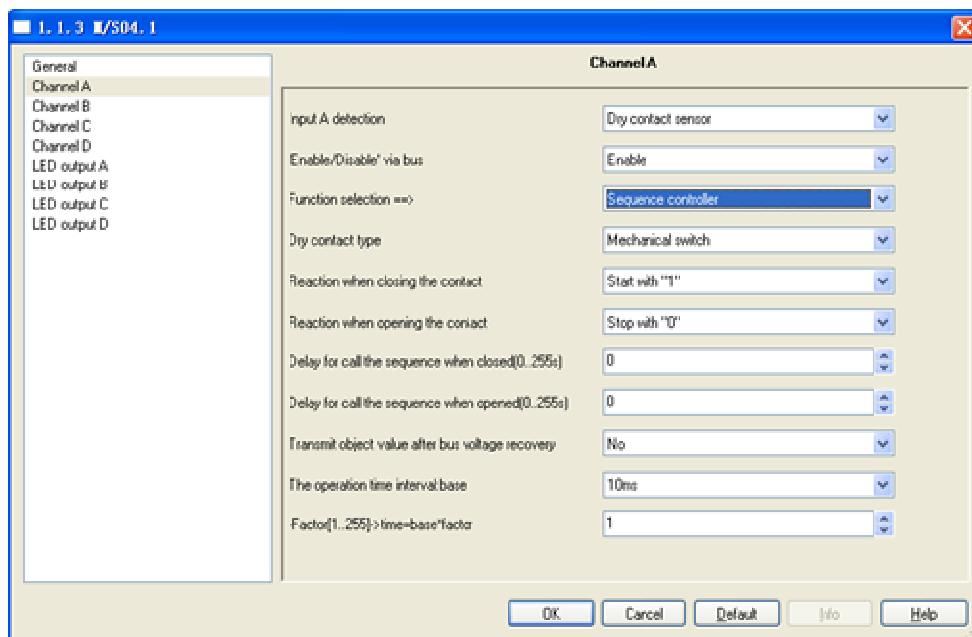

No.	ETS-Parameter	Range (default)	Description
88	Dry contact type	-(Mechanical switch) -Electronic switch	Function selection
2.1.1.5.1_Mechanical switch			
89	Call scene number when closing the contact	Invalid, (Scene NO.01)..Scene NO.64	Call corresponding scene when closing
90	Call scene number when opening the contact	Invalid..(Scene NO.02)..Scene NO.64	Call corresponding scene when opening
91	Delay for call the scene when closed (0...255s)	(0)..255	Set the delay time to call scene when closing
92	Delay for call the scene when Opened (0...255s)	(0)..255	Set the delay time to call scene when opening
93	Transmit object value after bus	-(NO)	Whether transmit object

	voltage recovery	-YES	<i>value after bus voltage recovery.</i> NO: do not transmit object value after bus voltage recovery. YES: will transmit object value after bus voltage recovery.
94	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
95	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>
2.1.1.5.2_Electronic switch			
96	The normally contact status is	Closed/(Open)	<i>Set the dry contact's normal status when have no operation.</i> Close: the contact's normal status is closed. Open: the contact's normal status is open.
97	Call scene when short button operation	Scene NO.01..Scene NO.24	<i>Call corresponding scene when short press</i>
98	Reaction when long button operation	-(Scene dimming) -Scene saving -Dimming and saving	<i>Set long press's control function</i> Scene dimming: will dim the scene when long press Scene saving: will save current value to the scene when long press Dimming and saving: will dim the scene and save the last dimming value to the scene when long press
99	-Scene dimming	-(Dim-> Brighter) -Dim-> Darker -Dim-> Brighter/Darker	Dim->Brighter: will increase the scene's brightness when long press Dim->Darker: will decrease the scene's brightness when long press Dim-> Brighter/Darker: will increase/decrease the scene's brightness when long press
100	Long button time after	0.2s..(1s)..60s	<i>Set time for long-press, define the long press by end-user</i>
101	Short button operation toggled	-(NO) -YES	<i>Enable/disable the toggle function for short press</i>
102	-Toggled scene of the short operation	Scene NO.01, (Scene NO.02)..Scene NO.24	<i>Call another scene when short press, toggle between two of them</i>
103	Delay for Call the scene(0..255s)	(0)..255	<i>Set the delay time to call scene</i>
104	The operation time interval:	(10ms)..1hour	<i>These two parameters are</i>

	base		<i>used to set the time interval of repeat operation, the time interval = base*factor.</i>
105	Factor[1..255]->time=base*factor	(1)...255	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>

2.1.1.6_Sequence controller

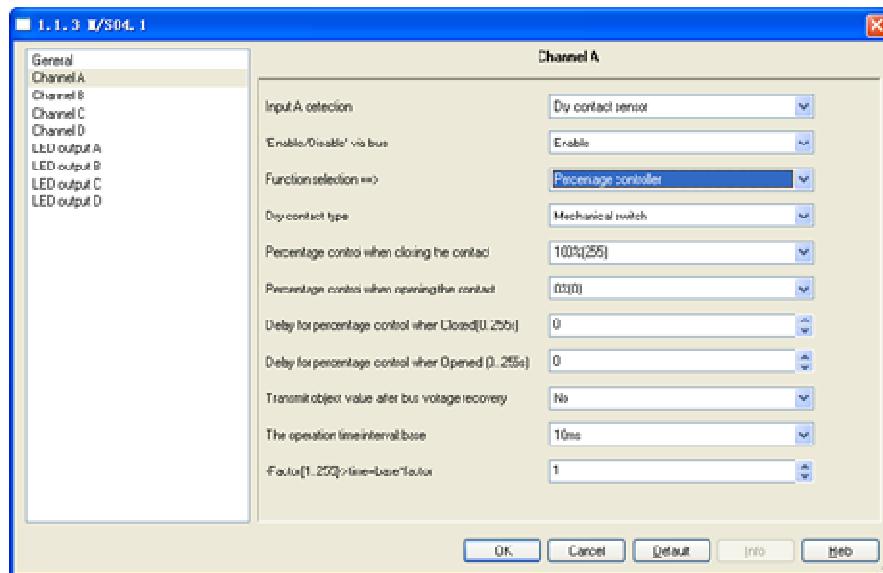

No.	ETS-Parameter	Range (default)	Description
106	Dry contact type	-{Mechanical switch) -{Electronic switch	<i>Function selection</i>
2.1.1.6.1_Mechanical switch			
107	Reaction when closing the contact	-Invalid -Toggle -(Start with "1") -Stop with "0"	<i>Set the function of the dry contact when closing it.</i> Invalid: the dry contact is invalid. Toggle: It will invert the last time's value then send it out when closing Start with"1": The value it will send is 1 to start the sequence. Stop with"0": The value it will send is 1 to stop the sequence.
108	Reaction when opening the contact	-Invalid -Toggle -Start with "1" -(Stop with "0")	<i>Set the function of the dry contact when opening it.</i> Invalid: the dry contact is invalid.

			<p>Toggle: It will invert the last time's value then send it out when opening</p> <p>Start with "1": The value it will send is 1 to start the sequence.</p> <p>Stop with "0": The value it will send is 0 to stop the sequence.</p>
109	Delay for call the sequence when closed(0..255s)	(0)..255	Set the delay time to call the sequence after closing
110	Delay for call the sequence when opened(0..255s)	(0)..255	Set the delay time to call the sequence after opening
111	Transmit object value after bus voltage recovery	-NO -YES	<p>Whether transmit object value after bus voltage recovery.</p> <p>NO: do not transmit object value after bus voltage recovery.</p> <p>YES: will transmit object value after bus voltage recovery.</p>
112	The operation time interval: base	(10ms)..1hour	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.
113	Factor[1..255]->time=base*factor	(1)...255	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.
2.1.1.6.2 Electronic switch			
114	The normally contact status is	Closed/(Open)	Set the dry contact's normal status when have no operation.
115	Reaction when short button operation	-Invalid -(Toggle) -Start with "1" -Stop with "0"	<p>Invalid: the dry contact is invalid.</p> <p>Toggle: It will invert the last time's value then send it out when short press</p> <p>Start with "1": The value it will send is 1 to start the sequence.</p> <p>Stop with "0": The value it will send is 0 to stop the sequence.</p>
116	Reaction when long button operation	-Invalid -Toggle -Start with "1" -Stop with "0"	<p>Invalid: the dry contact is invalid.</p> <p>Toggle: It will invert the last time's value then send it out when long press</p> <p>Start with "1": The value it will send is 1 to start the sequence.</p> <p>Stop with "0": The value it will send is 0 to stop the sequence.</p>

117	Long button time after	0.2s..(1s)..60s	Set time for long-press, define the long press by end-user
118	Delay for short operation(0..255s)	(0)..255	Set the delay time to send out telegram for short press
119	Delay for long operation(0..255s)	(0)..255	Set the delay time to send out telegram for long press
120	The operation time interval: base	(10ms)..1hour	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.
121	Factor[1..255]->time=base*factor	(1)...255	These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.

2.1.1.7_Percentage controller

No.	ETS-Parameter	Range (default)	Description
122	Dry contact type	-{(Mechanical switch) -Electronic switch}	Function selection
2.1.1.7.1_Mechanical switch			
123	Percentage control when closing the contact	-Invalid -0%(0)..(100%(255))	Set the percentage value when closing the dry contact Invalid: the dry contact is invalid. 0%(0)–100%(255) : the specific percentage value
124	Percentage control when opening the contact	-Invalid -(0%(0))..100%(255)	Set the percentage value when closing the dry contact Invalid: the dry contact is invalid. 0%(0)–100%(255) : the

			<i>specific percentage value</i>
125	Delay for percentage control when Closed (0..255s)	(0)..255	<i>Set the delay time to send out telegram when closing</i>
126	Delay for percentage control when Opened (0..255s)	(0)..255	<i>Set the delay time to send out telegram when opening</i>
127	Transmit object value after bus voltage recovery	-{NO} -YES	<i>Whether transmit object value after bus voltage recovery.</i> NO: do not transmit object value after bus voltage recovery. YES: will transmit object value after bus voltage recovery.
128	The operation time interval: base	(10ms)..1hour	<i>These two parameters are used to set the time interval of repeat operation, the time interval = base*factor.</i>

472	-Percentage value	(0%(0))..100%(255)	Set the output percentage value
473	-Threshold value type	-(1byte threshold) -2bytes threshold	Set the threshold control type
474	-Threshold (0..255) value	(0)..255	Set the threshold value
475	-Threshold(065535) value	(0)..65535	Set the threshold value
476	-String (14bytes) value	(Hello world!)	Set the output string content

2.2_LED Output A-D

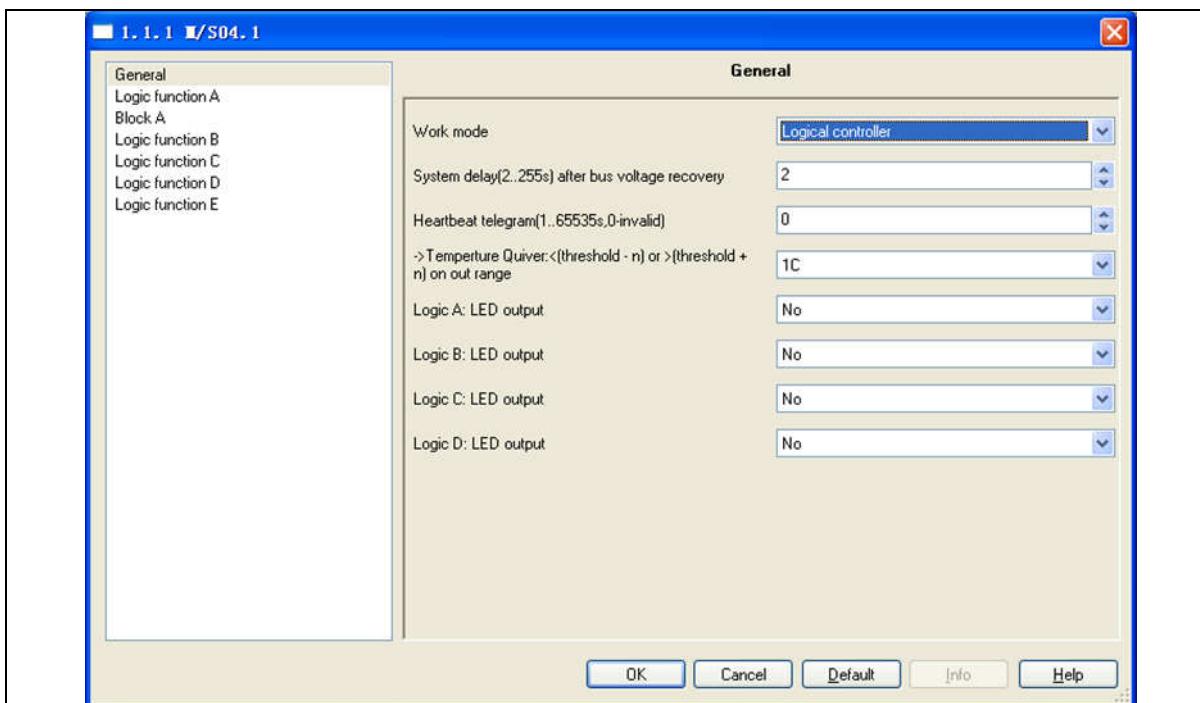

No.	ETS-Parameter	Range (default)	Description
477	LED functionality	-(Switch status ON/OFF) -Flashing	Switch state ON/OFF : the LED shows the on/off states of object Flashing : the LED's state is flashing.
478	Maximum drive voltage of LED(100%)	1V,(2V)..10V	Set the maximum drive voltage of LED. The range is 1V to 10V.
479	Default ON brightness of LED	10%..(100%255)	Set the default brightness of LED when on.
480	LED control mode	-(Local status) -Via bus (1bit-Operation and	Set the control mode of LED. Local status : The LED is controlled by local

		1byte-Brightness)	<i>status.</i> Via bus: the LED is controlled by the telegram via bus.
481	Change ON brightness via bus	(NO), YES	<i>Enable/disable the function that change on brightness via bus.</i> NO: you can't change on brightness via bus. YES: you can change on brightness via bus.
482	LED status (1 bit) response	-(Invalid) -1 bit always response -1 bit only changed	<i>Set the 1 bit response type of LED status.</i> 1 bit always response: it will always report its status to the system. 1 bit only changed: it will only report its status to the system when status changes.
483	LED status (1 byte) response	-(Invalid) -1 byte always response -1 byte only changed	<i>Set the 1 byte response type of LED status.</i> 1 byte always response: it will always report its status to the system. 1 byte only changed: it will only report its status to the system when status changes.
484	LED status after bus voltage	(unchanged), ON, OFF	<i>Set to LED state after bus voltage recovery.</i>
2.2.1 Switch status ON/OFF			
485	LED indication	-(ON if value>='1', else OFF) -ON if value is '0', else OFF -Always ON -Always OFF	ON if value>='1', else OFF: if the value>="1", LED state is ON, else LED state is OFF. ON if value is '0', else OFF: if the value is 0, LED state is ON, else LED state is OFF. Always ON: LED state is always on. Always OFF: LED state is always OFF.
486	LED automatically darker after a delay (Valid only LED status is ON)	(NO), YES	<i>Enable/disable the LED automatically darker function when has no operation</i>
487	LED automatically darker brightness	0%,(1%)..100%255	<i>Set the brightness value when darken.</i>
488	LED automatically darker delay time: base	100ms, (1sec), 1min 1hour	<i>These two parameters are used to set the delay time for auto darken, the delay time = base*factor.</i>
489	Factor[1..255]->time=base*factor	1..(5)..255	<i>These two parameters are used to set the delay time for auto darken, the delay time = base*factor.</i>
2.2.2 Flashing			
490	LED flashing indication	-(Flashing if value>='1', else stop) -Flashing if value is '0', else stop -Always flashing	Flashing if value>='1', else OFF: if the value>='1', LED state is flashing; else LED state is static. Flashing if value is '0', else OFF: if the value is 0, LED state is flashing; else LED state is static. Always flashing: LED state is always flashing.
491	Duration time for brightness: base	-10ms -(100ms) -1sec	<i>These two parameters are used to set the fade time to on the LED, the fade time=base*factor.</i>

		-1min -1hour	
492	Factor[1..255]->time=base*factor	(1)..255	<i>These two parameters are used to set the fade time to on the LED, the fade time=base*factor. The LED will reach the setting on brightness after the fade time.</i>
493	Duration time for darkness: base	-10ms -(100ms) -1sec -1min -1hour	<i>These two parameters are used to set the fade time to off the LED, the fade time=base*factor.</i>
494	Factor[1..255]->time=base*factor	(1)..255	<i>These two parameters are used to set the fade time to off the LED, the fade time=base*factor. The LED will off after the fade time.</i>
495	Flashing time limit	(NO), YES	<i>These two parameters are used to set the valid time of flashing, after this time, the LED will stop flashing</i>
496	Flashing time limit: base	-(1sec) -1min -1hour	<i>These two parameters are used to set the valid time for LED flashing, the valid time=base*factor.</i>
497	Factor[1..255]->time=base*factor	1..(5)..255	<i>These two parameters are used to set the valid time for LED flashing, the valid time=base*factor.</i>
	LED status after stop	(unchanged), ON, OFF	<i>Set the LED status after stop flashing</i>

XX

No.	ETS-Parameter	Range (default)	Description
498	Work mode	- (Sensors controller) - Logical controller - Dimming controller	<i>Set the work mode: Logical controller</i>
499	System delay (2-255s) after bus voltage recovery	(2)..255s	<i>Set the delay time for the device to work after power on, the range is 2-255s</i>
500	Heartbeat telegram (1..65535s,0-invalid)	(0)..65535s	<i>If the parameter is set to nonzero, the device will send a telegram data (alternately between 0 and 1) cyclically after time out; if it's set to 0, this function is invalid.</i>
501	Temperature Quiver: < (threshold - n) or >(threshold +n) on out range	0C, (1C),..10C	<i>The effective range is larger than threshold1 and less than threshold2 The setting range is larger than the (threshold1-n) and less than (threshold2+n). Suppose the temperature is in the effective range, when it changes within the setting range, the status will not change. Suppose the temperature is in the effective range, when it changes out of the setting range, the status will change. Suppose the temperature is not in the effective range, only when the temperature changes into the effective range, the status will change.</i>
502	Logic A: LED output Logic B: LED output Logic C: LED output Logic D: LED output	(NO), YES	NO: LED output is invalid. YES: it will appear a setting page of the "LED output A". That page is used to set the LED state parameter. Channel B,C,D outputs are same as Channel A.

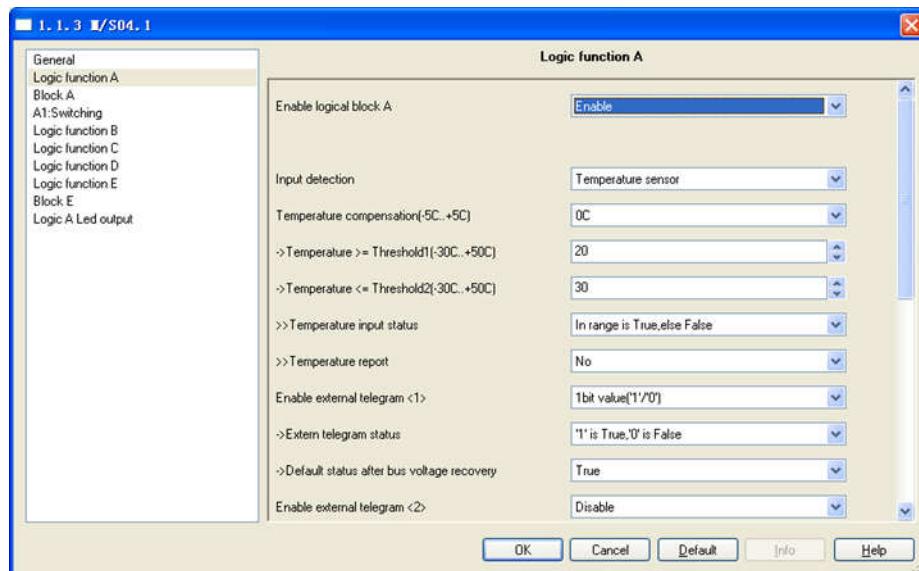

3.1_Logic A-D Led output

No.	ETS-Parameter	Range (default)	Description
503	LED functionality	- (Switch status ON/OFF) - Flashing	Switch state ON/OFF: the LED shows the on/off states of object Flashing: the LED's state is flashing.
504	Maximum drive voltage of LED(100%)	1V,(2V)..10V	Set the maximum drive voltage of LED. The range is 1V to 10V.
505	Default ON brightness of LED	10%..100%(255)	Set the default brightness of LED when on.
506	LED control mode	- (Local status) - Via bus (1bit-Operation and 1byte-Brightness)	Set the control mode of LED. Local status: The LED is controlled by local status. Via bus: the LED is controlled by the telegram via bus.
507	Change ON brightness via bus	(NO), YES	Enable/disable the function that change on brightness via bus. NO: you can't change on brightness via bus. YES: you can change on brightness via bus.
508	LED status (1 bit) response	- (Invalid) - 1 bit always response - 1 bit only changed	Set the 1 bit response type of LED status. 1 bit always response: it will always report its status to the system. 1 bit only changed: it will only report its status to the system when status changes.
509	LED status (1 byte) response	- (Invalid) - 1 byte always response - 1 byte only changed	Set the 1 byte response type of LED status. 1 byte always response: it will always report its status to the system. 1 byte only changed: it will only report its status to the system when status changes.
510	LED status after bus voltage recovery	- (unchanged) - ON - OFF	Set to LED state after bus voltage recovery.
3.1.1_Switch status ON/OFF			
511	LED indication	- (ON if value>='1', else OFF) - ON if value is '0', else	ON if value>='1', else OFF: if the value>="1", LED state is ON, else LED state is OFF.

		OFF -Always ON -Always OFF	ON if value is '0', else OFF: if the value is 0, LED state is ON, else LED state is OFF. Always ON: LED state is always on. Always OFF: LED state is always OFF.
512	LED automatically darker after a delay (Valid only LED status is ON)	(NO), YES	Enable/disable the LED automatically darker function when has no operation
513	-LED automatically darker brightness	0%,(1%)..100%255	Set the brightness value when darken.
514	-LED automatically darker delay time: base	100ms, (1sec), 1min 1hour	These two parameters are used to set the delay time for auto darken, the delay time = base*factor.
515	-Factor[1..255]->time=base*factor	1..(5)..255	These two parameters are used to set the delay time for auto darken, the delay time = base*factor.

3.1.2 Flashing

516	LED flashing indication	-(Flashing if value>='1', else stop) -Flashing if value is '0', else stop -Always flashing	Flashing if value>='1', else OFF: if the value>='1', LED state is flashing; else LED state is static. Flashing if value is '0', else OFF: if the value is 0, LED state is flashing; else LED state is static. Always flashing: LED state is always flashing.
517	Duration time for brightness: base	-10ms -(100ms) -1sec -1min -1hour	These two parameters are used to set the fade time to on the LED, the fade time=base*factor.
518	Factor[1..255]->time=base*factor	(1)..255	These two parameters are used to set the fade time to on the LED, the fade time=base*factor. The LED will reach the setting on brightness after the fade time.
519	Duration time for darkness: base	-10ms -(100ms) -1sec -1min -1hour	These two parameters are used to set the fade time to off the LED, the fade time=base*factor.
520	Factor[1..255]->time=base*factor	(1)..255	These two parameters are used to set the fade time to off the LED, the fade time=base*factor. The LED will off after the fade time.
521	Flashing time limit	(NO), YES	These two parameters are used to set the valid time of flashing, after this time, the LED will stop flashing
522	Flashing time limit: base	-10ms -(100ms) -1sec -1min -1hour	These two parameters are used to set the valid time for LED flashing, the valid time=base*factor.
523	Factor[1..255]->time=base*factor	1..(5)..255	These two parameters are used to set the valid time for LED flashing, the valid time=base*factor.
524	LED status after stop	-unchanged -ON -(OFF)	Set the LED status after stop flashing

3.2_Logic function A-D

No.	ETS-Parameter	Range (default)	Description
525	Enable logical block A-D	- (Disable) - Enable	Disable: the logical block A is invalid. Enable: Enable logic block A's function.
526	Input detection A-D	- (No detection) - Dry contact sensor - Temperature sensor	Disable: disable the input detection Dry contact sensor: set dry contact sensor as the input detection. Temperature sensor: set the temperature sensor as input detection.
3.2.1_Dry contact sensor			
527	Dry contact type	- (Mechanical switch) - Electronic switch	<i>Function selection</i>
3.2.1.1_Mechanical switch			
528	Status when closing the contact	- Invalid - (True) - False - Toggle	<i>Set the logic status when closing the contact</i> Invalid: it's invalid True: set the logic status to be true False: set the logic status to be false Toggle: it will invert the last time's status then send it out
529	Status when opening the contact	- Invalid - True - (False) - Toggle	<i>Set the logic status when opening the contact</i> Invalid: it's invalid True: set the logic status to be true False: set the logic status to be false Toggle: it will invert the last time's status then send it out
530	Dry contact status report	- (No) - Yes	No: will not report contact's status to the bus Yes: will report contact's status to the bus
531	Dry status report mode	- (Report when changed) - Report cyclic	Report when changed: it will report the contact status to the bus only when it's changed

			Report cyclic: it will report the contact status to the bus cyclically
532	Dry status report of minimum time interval: base	(1sec..1hour)	This parameter is used to set the time base of status report when changed.
533	Dry status report cycle: base	(1sec..1hour)	This parameter is used to set the time base of status report cyclically.
534	Factor[1..255]->time=base*factor	(1)..255	This parameter is used to set the time factor, the time interval=base*factor
535	Enable external telegram <1>..<5>	-(Disable) -1bit value('1'/'0') -1byte threshold (0..255) -2bytes threshold (0..65535) -2bytes float threshold (0..3000) -4bytes threshold (0..2147483647)	Set the external telegram's type here.
536	Extern telegram status	-('1' is True, '0' is False) -'0' is True, '1' is False	'1' is True, '0' is False: when receives 1, the input status is true; when receives 0, the input status is false '0' is True, '1' is False: when receives 0, the input status is true; when receives 1, the input status is false
537	Default status after bus voltage recovery	-(True) -False	Set the default status of external telegram after voltage recovery.
538	1byte threshold(0..255)	0..(100)..255	Set the threshold value of 1 byte
539	Quiver:<(threshold-n) or >(threshold+n) on false	0..(1)..255	Set the quiver value for threshold, when it receives the value <threshold-n or >threshold+n, the input status is false
540	Extern telegram status	-(True if REV value>=Threshold, else False) -True if REV value<=Threshold, else False	True if REV value >= threshold, else False: when external telegram value >= threshold, the input status is true, else is false. True if REV value <= threshold, else False: when external telegram value <= threshold, the input status is true, else is false.
541	Default status after bus voltage recovery	-(True) -False	Set the default status as true or false after voltage recovery.
542	2byte threshold(0..65535)	0..(1000)..65535	Set the threshold value of 2bytes
543	Quiver:<(threshold-n) or >(threshold+n) on false	0..(1)..255	Set the quiver value for threshold, when it receives the value <threshold-n or >threshold+n, the input status is false
544	Extern telegram status	-(True if REV value>=Threshold, else False) -True if REV value<=Threshold, else False	True if REV value >= threshold, else False: when external telegram value >= threshold, the input status is true, else is false. True if REV value <= threshold, else False: when external telegram value <= threshold, the input status is true, else is false.
545	Default status after bus voltage recovery	-(True) -False	Set the default status as true or false after voltage recovery.
546	2bytes float threshold(0..3000)	0..(100)..3000	Set the threshold value of 2bytes float

547	Quiver:<(threshold-n) or >(threshold+n) on false	0..(1)..255	<i>Set the quiver value for threshold, when it receives the value <threshold-n or >threshold+n, the input status is false</i>
548	Extern telegram status	-(True if REV value>=Threshold, else False) -True if REV value<=Threshold, else False	True if REV value >= threshold, else False: when external telegram value >= threshold, the input status is true, else is false. True if REV value <= threshold, else False: when external telegram value <= threshold, the input status is true, else is false.
549	Default status after bus voltage recovery	-(True) -False	<i>Set the default status as true or false after voltage recovery.</i>
550	4bytes threshold (0..2147483647)	0..(1000000)..2147483647	<i>Set the threshold value of 4bytes</i>
551	Quiver:<(threshold-n) or >(threshold+n) on false	0..(1)..255	<i>Set the quiver value for threshold, when it receives the value <threshold-n or >threshold+n, the input status is false</i>
552	Extern telegram status	-(True if REV value>=Threshold, else False) -True if REV value<=Threshold, else False	True if REV value >= threshold, else False: when external telegram value >= threshold, the input status is true, else is false. True if REV value <= threshold, else False: when external telegram value <= threshold, the input status is true, else is false.
553	Default status after bus voltage recovery	-(True) -False	<i>Set the default status as true or false after voltage recovery.</i>
3.2.1.2 Electronic switch			
554	The normally contact status is	-closed -(open)	<i>Close: the contact's normal status is closed.</i> <i>Open: the contact's normal status is open</i>
555	Status when short button operation	-Invalid -(True) -False -Toggle	<i>Set the logic status when short press</i> Invalid: it's invalid True: set the logic status to be true False: set the logic status to be false Toggle: it will invert the last time's status then send it out
556	Status when long button operation	-Invalid -True -(False) -Toggle	<i>Set the logic status when long press</i> Invalid: it's invalid True: set the logic status to be true False: set the logic status to be false Toggle: it will invert the last time's status then send it out
557	Long button time after	0.2s..(1s)..60s	<i>Set time for long-press, define the long press by end-user</i>
558	The status after bus voltage recovery	-False -(True)	<i>Set the logic status after bus voltage recovery.</i>
559	Dry contact status report	-No -(Yes)	No: will not report contact's status to the bus Yes: will report contact's status to the bus
560	Dry status report cycle mode	-Report when changed -(Report cyclic)	Report when changed: it will report the contact status to the bus only when it's changed Report cyclic: it will report the contact status to the bus cyclically

561	Dry status report cycle: base	-(1sec) -1min -1hour	<i>This parameter is used to set the time base of status report cyclically.</i>
562	Dry status report of minimum time interval: base	-(1sec) -1min -1hour	<i>This parameter is used to set the time base of status report when changed.</i>
563	Factor[1..255]->time=base*factor	(1)..255	<i>This parameter is used to set the time factor, the report time interval = base*factor</i>

Logic function E	->Logic E output status when disabled	Lock status
E3:Switching		

No.	ETS-Parameter	Range (default)	Description
614	Enable logical block E	-(Disable) -Enable	Disable: disable the logic block E function Enable: enable the logic block E function
615	Enable logic A	-(Disable) -Enable	Enable/disable the logic A to be one logic input
616	Result of logic A inverted	-(No) -Yes	NO: will not invert block A's logic status YES: will invert block A's logic status
617	Logical relation of logic A to next	-AND -OR -(Invalid)	Set the logic relation between logic A and the next logic block
618	Enable logic B	-(Disable) -Enable	Enable/disable the logic B to be one logic input
619	Result of logic B inverted	-(No) -Yes	NO: will not invert block B's logic status YES: will invert block B's logic status
620	Logical relation of logic B to next	-AND -OR -(Invalid)	Set the logic relation between logic B and the next logic block
621	Enable logic C	-(Disable) -Enable	Enable/disable the logic C to be one logic input
622	Result of logic C inverted	-(No) -Yes	NO: will not invert block C's logic status YES: will invert block C's logic status
623	Logical relation of logic C to next	-AND -OR -(Invalid)	Set the logic relation between logic C and the next logic block
624	Enable logic D	-(Disable) -Enable	Enable/disable the logic D to be one logic input
625	Result of logic D inverted	-(No) -Yes	NO: will not invert block D's logic status YES: will invert block D's logic status
626	Logical relation of logic D to next	-AND -OR -(Invalid)	Set the logic relation between logic D and the next logic block
627	Result of logic E inverted	-(No) -Yes	NO: will not invert block E's logic status YES: will invert block E's logic status
628	Enable/Disable logical	-(No)	No: can not change logic function via bus

	function via bus	-Yes	Yes: when receives 1, enable the logic function; when receives 0, disable logic function
629	Logic E output status when disabled	-(Lock status) -True -False	Set the logic output status when disable the logic E Lock status: keep the last time's status True: set the logic status to be true False: set the logic status to be false

3.4_Block A-E

No.	ETS-Parameter	Range (default)	Description
630	Object output 1-10 (to bus)	-(Invalid) -Switch controller -Alarm controller -Shutter controller -Scene controller -Sequence controller -Percentage controller -Threshold controller -String (14bytes) controller	Select the output type for logic control
631	Telegram is transmitted of minimum time interval: base	10ms..(100ms)..1hour	Set the time base of minimum time interval to transmit the telegram
632	Factor[1..255]->time=base*factor	(1)..255	Set the time factor of minimum time interval to transmit the telegram, the minimum time interval=base*factor
633	Repeat to transmit the telegram enable	-(No) -Yes	No: disable the repeat transmission function Yes: repeat to transmit the telegram
634	Transmit telegram on	-True -False	Set the telegram type to transmit True: only transmit the true telegram

		-(True and False)	False: only transmit the false telegram True and false: transmit the true and false telegram
635	Transmit time interval(2..255min)	(2)..255	Set the time interval to transmit the telegram
3.4.1 A-E 0..10: Switching			
636	The status after bus voltage recovery	-Invalid -ON -OFF -Recovery (According to logical status)	Set the switch status after bus voltage recovery Invalid: the status is invalid ON: will switch ON the channel after bus voltage recovery. OFF: will switch OFF the channel after bus voltage recovery. Recovery: restore the switch status before power off According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.
637	Logical block output when TRUE	-Invalid -Toggle (ON) -OFF	Set the switch output function when true Invalid: the switch output is invalid Toggle: It will invert the last time's value then send itout when true ON: The value it will send is 1 when true OFF: The value it will send is 0 when true
638	Time delay for logical block when TRUE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when true
639	Logical block output when FALSE	-Invalid -Toggle -ON (OFF)	Set the switch output function when false Invalid: the switch output is invalid Toggle: It will invert the last time's value then send itout when false ON: The value it will send is 1 when false OFF: The value it will send is 0 when false
640	Time delay for logical block when FALSE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when false
3.4.2 A-E 1..10: Alarm			
641	The status after bus voltage recovery	-Invalid -Alarm -No alarm -Recovery (According to logical status)	Set the alarm status after bus voltage recovery Invalid: the status is invalid Alarm: will send alarm telegram after bus voltage recovery. No Alarm: will send no alarm telegram after bus voltage recovery. Recovery: restore the alarm status before power off According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.
642	Logical block output when TRUE	-Invalid -Toggle (Alarm) -No Alarm	Set the alarm output function when true Invalid: the alarm output is invalid Toggle: It will invert the last time's value then send itout when true

			Alarm: The value it will send is 1 when true No Alarm: The value it will send is 0 when true
643	Time delay for logical block when TRUE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when true
644	Logical block output when FALSE	-Invalid -Toggle -Alarm (No Alarm)	Set the alarm output function when false Invalid: the alarm output is invalid Toggle: It will invert the last time's value then send itout when false Alarm: The value it will send is 1 when false No Alarm: The value it will send is 0 when false
645	Time delay for logical block when FALSE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when false
3.4.3 A-E 1..10: Shutter			
646	The status after bus voltage recovery	-Invalid -UP -DOWN -Recovery (According to logical status)	Set the shutter status after bus voltage recovery Invalid: the status is invalid UP: will send up telegram after bus voltage recovery. DOWN: will send down telegram after bus voltage recovery. Recovery: restore the shutter status before power off According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.
647	Logical block output when TRUE	-Invalid -Toggle (UP) -DOWN	Set the shutter output function when true Invalid: the shutter output is invalid Toggle: It will send up/down telegram when true UP: it will send move up telegram when true DOWN: it will send move down telegram when true
648	Time delay for logical block when TRUE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when true
649	Logical block output when FALSE	-Invalid -Toggle -UP (DOWN)	Set the shutter output function when false Invalid: the shutter output is invalid Toggle: It will send up/down telegram when false UP: it will send move up telegram when false DOWN: it will send move down telegram when false
650	Time delay for logical block when FALSE (0..65535s)	(0)..65535	Set the delay time to send out the control telegram when false
3.4.4 A-E 1..10: Scene			
651	The status after bus voltage recovery	-Invalid -Defined scene -Recovery (According to logical	Set the output scene after bus voltage recovery Invalid: the scene output is invalid Defined scene: will output defined scene

		status)	<i>after bus voltage recovery. Recovery: restore the scene before power off According to logical status:if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.</i>
652	Recovery defined scene NO.	(Scene NO.01)..Scene NO.64	<i>Set the output scene number for defined scene option</i>
653	Logical block output when TRUE	(Scene NO.01)..Scene NO.64	<i>Set the output scene number when true</i>
654	Time delay for logical block when TRUE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when true</i>
655	Logical block output when FALSE	-Invalid -Scene NO.01..(Scene NO.2)..Scene NO.64	<i>Set the output scene number when false</i>
656	Time delay for logical block when FALSE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when false</i>
3.4.5 A-E 1..10: Sequence			
657	The status after bus voltage recovery	-Invalid -Start -Stop -Recovery -(According to logical status)	<i>Set the output sequence after bus voltage recovery Invalid: the sequence output is invalid Start: will send telegram 1 to start the sequence after bus voltage recovery. Stop: will send telegram 0 to stop the sequence after bus voltage recovery. Recovery: restore the sequence status before power off According to logical status:if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.</i>
658	Logical block output when TRUE	-Invalid -Toggle -(Start) -Stop	<i>Set the sequence output function when true Invalid: the sequence output is invalid Toggle:It will invert the last time's value then send itout when true Start: will send telegram 1 to start the sequence when true Stop: will send telegram 0 to stop the sequence when true</i>
659	Time delay for logical block when TRUE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when true</i>
660	Logical block output when FALSE	-Invalid -Toggle -Start -(Stop)	<i>Set the sequence output function when false Invalid: the sequence output is invalid Toggle:It will invert the last time's value then send itout when false Start: will send telegram 1 to start the sequence when false Stop: will send telegram 0 to stop the sequence when false</i>
661	Time delay for logical block when FALSE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when false</i>

3.4.6 A-E 1..10: Percentage			
662	The status after bus voltage recovery	-Invalid -Defined percentage -Recovery -(According to logical status)	<p><i>Set the output percentage after bus voltage recovery</i></p> <p>Invalid: the percentage output is invalid</p> <p>Defined percentage: will output defined percentage value after bus voltage recovery.</p> <p>Recovery: restore the percentage value before power off</p> <p>According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.</p>
663	Recovery defined percentage	(0%(0))..100%(255)	<i>Set the output percentage value for defined percentage option</i>
664	Logical block output when TRUE	Invalid, 0%(0)..(100%(255))	<i>Set the output percentage value when true</i>
665	Time delay for logical block when TRUE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when true</i>
666	Logical block output when FALSE	Invalid, (0%(0))..100%(255)	<i>Set the output percentage value when false</i>
667	Time delay for logical block when FALSE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when false</i>
3.4.7 A-E 1..10: Threshold			
668	Threshold control type	-(1byte threshold) -2bytes threshold	<i>Set the threshold control type</i>
669	The status after bus voltage recovery	-Invalid -Defined threshold -Recovery -(According to logical status)	<p><i>Set the output threshold value after bus voltage recovery</i></p> <p>Invalid: the threshold output is invalid</p> <p>Defined threshold: will output defined threshold value after bus voltage recovery.</p> <p>Recovery: restore the threshold value before power off</p> <p>According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.</p>
670	Recovery defined threshold (0..255)	(0)..255	<i>Set the output threshold value for defined threshold option</i>
671	Recovery defined threshold (0..65535)	(0)..65535	<i>Set the output threshold value for defined threshold option</i>
672	TRUE is valid?	-No -(Yes)	<p>No: disable the logic true function</p> <p>Yes: enable the logic true function</p>
673	Logical block output when TRUE	0..(255)	<i>Set the output threshold value when true</i>
674	Logical block output when TRUE	0..(1000)..65535	<i>Set the output threshold value when true</i>
675	Time delay for logical block when TRUE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when true</i>
676	FALSE is valid?	-No -(Yes)	<p>No: disable the logic false function</p> <p>Yes: enable the logic false function</p>
677	Logical block output when FALSE	(0)..255	<i>Set the output threshold value when false</i>

678	Logical block output when FALSE	(0)..65535	<i>Set the output threshold value when false</i>
679	Time delay for logical block when FALSE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when false</i>
3.4.8 A-E 1..10: String(14bytes)			
680	The status after bus voltage recovery	-Invalid -Defined string -(According to logical status)	<i>Set the output string content after bus voltage recovery</i> Invalid: the string output is invalid Defined string: will output defined string content after bus voltage recovery. Recovery: restore the string content before power off According to logical status: if logical status is true, trigger the action which set in logical output when true; if logical status is false, trigger the action which set in logical output when false.
681	Recovery defined string	(Hello world!)	<i>Set the output string content for defined string option</i>
682	TRUE is valid?	-No -(Yes)	No: disable the logic true function Yes: enable the logic true function
683	Logical block output when TRUE	(Hello world!)	<i>Set the output string content when true</i>
684	Time delay for logical block when TRUE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when true</i>
685	FALSE is valid?	-No -(Yes)	No: disable the logic false function Yes: enable the logic false function
686	Logical block output when FALSE	(Hello world!)	<i>Set the output string content when false</i>
687	Time delay for logical block when FALSE (0..65535s)	(0)..65535	<i>Set the delay time to send out the control telegram when false</i>

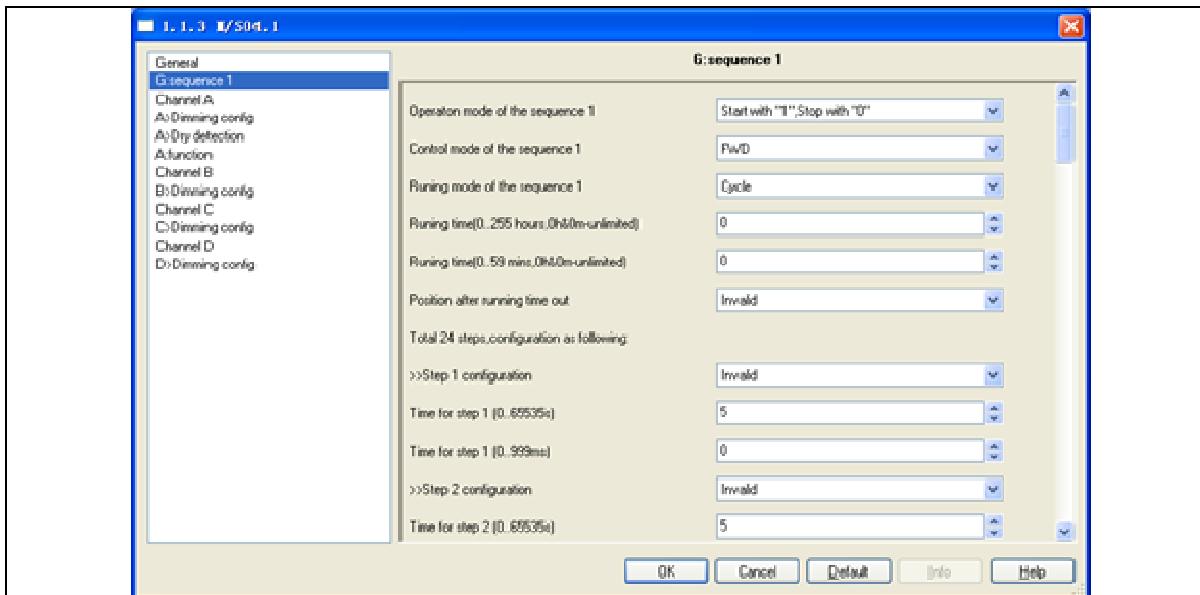

XX

4.0 Dimming controller

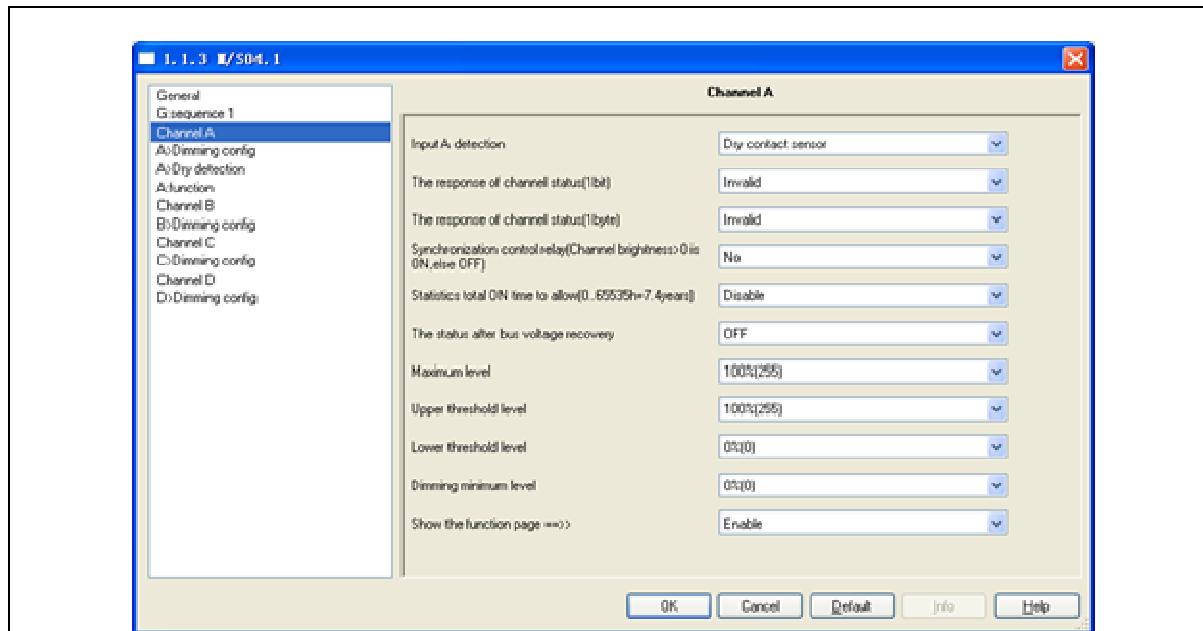

No.	ETS-Parameter	Range (default)	Description
688	Work mode	- (Sensors controller) - Logical controller - Dimming controller	<i>Set the work mode- dimming controller</i>
689	System delay (2-255s) after bus voltage recovery	(2)..255s	<i>Set the delay time for the device to work after power on, the range is 2-255s</i>
690	Heartbeat telegram (0..65535s,0-invalid)	(0)..65535s	<i>If the parameter is set to nonzero, the device will send a telegram data (alternately between 0 and 1) cyclically after time out; if it's set to 0, this function is invalid.</i>
691	Temperature Quiver: <(threshold - n) or >(threshold +n) on out range)	0C, (1C)..10C	<i>The effective range is larger than threshold1 and less than threshold2 The setting range is larger than the (threshold1-n) and less than (threshold2+n). Suppose the temperature is in the effective range, when it changes within the setting range, the status will not change. Suppose the temperature is in the effective range, when it changes out of the setting range, the status will change. Suppose the temperature is not in the effective range, only when the temperature changes into the effective range, the status will change.</i>
692	Enable sequence 1-5	-(Disable) -Enable	Disable: sequence function is invalid Enable: enable the sequence control function

4.1 G: sequence 1-5

No.	ETS-Parameter	Range (default)	Description
693	Operation mode of the sequence 1-5	- (Start with "1", Stop with "0") - Start with "0", Stop with "1" - Start with "1/0", can't stop	Start with "1", Stop with "0": When receives "1", run the sequence; When receives 0, stop the sequence. Start with "0", Stop with "1": when receives 0, run the sequence; When receives 1, stop the sequence. Start with "1/0", can't stop: whether receives 1 or 0, run the sequence.
694	Control mode of the sequence 1-5	- (FWD) - REW - Random	FWD: Forward mode REW: Back work mode RANDOM: Random mode
695	Running mode of the sequence 1-5	- Single - (Cycle)	Single: Run only one time Cycle: run the sequence cyclically
696	Running time(0...255hours,0h&0m-unlimited)	(0)..255	Set the sequence running time(0-255h), after the time, it will stop running automatically. if the time is set to 0h&0m, then the running time is unlimited.
697	Running time(0...59mins,0h&0m-unlimited)	(0)..59	Set the sequence running time(0-59min), after the time, it will stop running automatically. if the time is set to 0h&0m, then the running time is unlimited.
698	Position after time out	- (Invalid) - Scene NO.1..Scene NO.64	If the sequence running in Cycle mode, and the run time is greater than zero, After time out, the sequence will call the defined scene.
699	Step1..24 configuration	- (Invalid) - Scene NO.1..Scene NO.64	Set the running scene for each step, one sequence can have up to 24 steps
700	Time for step 1..24 (0...65535s)	0..(5)..65535	Set the running time(0-65535s) for each step.
701	Time for step 1(0...999ms)	(0)..999	Set the running time(0-999ms) for each step.

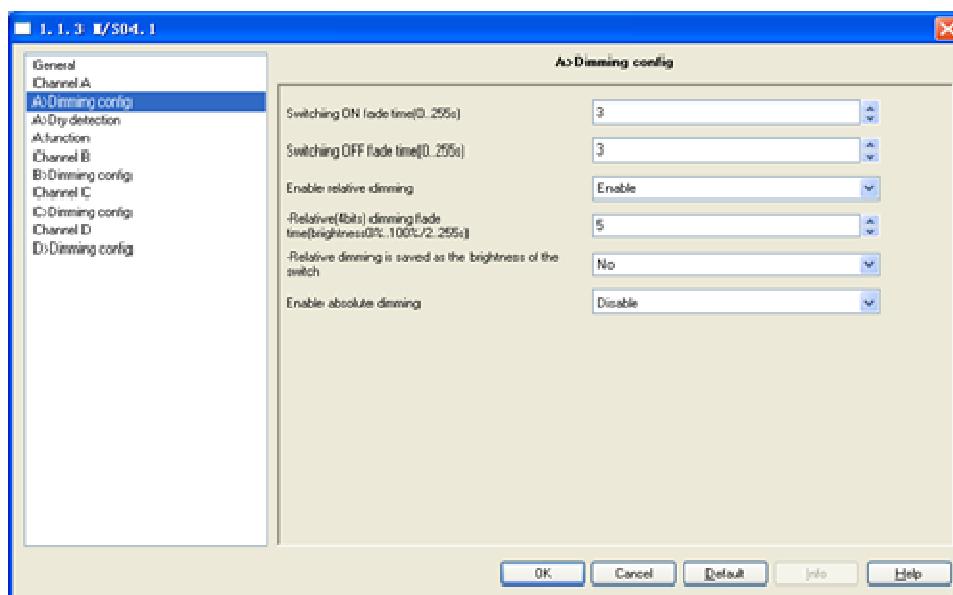

4.2 Channel A-D

No.	ETS-Parameter	Range (default)	Description
702	Input A-D detection	- (No detection) - Dry contact sensor - Temperature sensor	No detection: Input type is invalid. Dry contact: input type is dry contact sensor Temperature sensor: input type is temperature sensor
703	The response of channel status(1bit)	- (Invalid) - 1bit always response - 1bit only changed	1 bit always response: it will always report status to bus, If the brightness>0, report telegram 1 If the brightness=0, report telegram 0 1 bit only changed: it will report when the brightness change from nonzero(zero) to zero (nonzero).
704	The response of channel status(1byte)	- (Invalid) - 1byte always response - 1byte only changed	1 byte always response: it will always report the brightness value to bus. 1 byte only changed: it will report the brightness value to bus only when change
705	Synchronization control relay (Channel brightness>0 is ON, else OFF)	- (No) - Yes	Use to control the relay, when receives the brightness>0 telegram, switch on the relay; when receives the brightness=0 telegram, switch off the relay. It's specially used to shut down the ballast completely with the help of relay.
706	Statistics total ON time to allow (0..65535h=7.4years)	- (Disable) - Enable	This function is used to calculate the total ON time for channel output, the maximum time is 65535h. This function is very useful, because user can know channel work status through this function. Disable: don't timing. Enable: enable statistics time function.
707	Alarm when time out (1...65535h,0=invalid)		When the device's operating time arrives the setting value will send alarm telegram.

708	Transmit telegram interval when alarm (1..255s)		Set the time interval to transmit the alarm telegram.
709	The status after bus voltage recovery	-OFF -Defined brightness value -Last brightness value	OFF: the channel's status is off after bus voltage recovery Defined brightness value: the channel's status is set to defined brightness value after bus voltage recovery Last brightness value: the channel's status will restore to last brightness value before power off
710	Brightness value	(0%(0))..100%(255)	Set the output brightness value for defined brightness value option.
711	Maximum level	0%(0)..(100%(255))	Set the maximum level.
712	Upper threshold level	0%(0)..(100%(255))	Set the upper threshold level.
713	Lower threshold level	(0%(0))..100%(255)	Set the lower threshold level.
714	Dimming minimum level	(0%(0))..100%(255)	Set the dimming minimum level.
715	Show the function page	-Disable -Enable	Disable: Don't show the function page about dimmer. Enable: Show the function page, the page is used to set the function about dimmer.

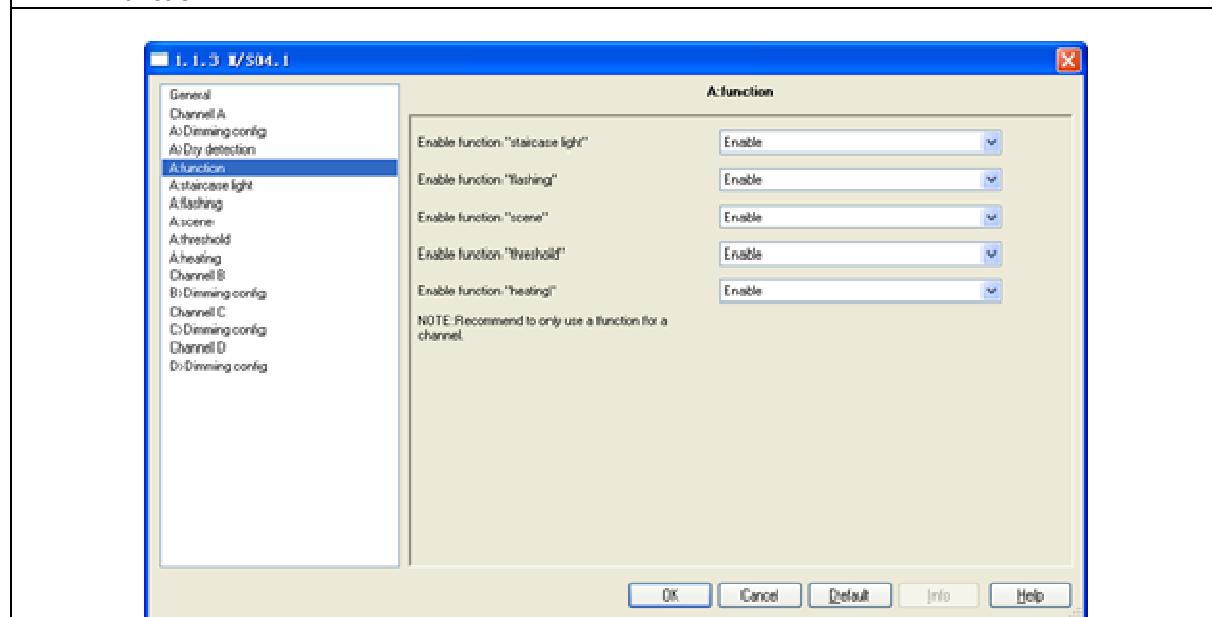

4.3 A-D Dimming config

No.	ETS-Parameter	Range (default)	Description
716	Switching ON fade time(0...255s)	0..(3)..255	Set the fade time to switch on. It will take the setting time to change value from 0% to 100%.

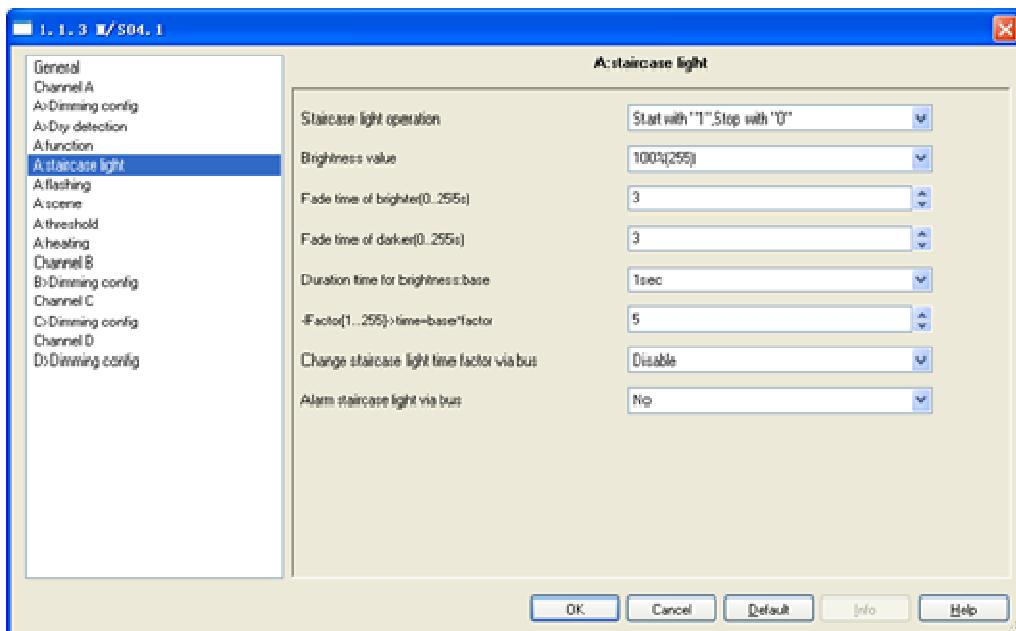

717	Switching OFF fade time(0...255s)	0..(3)..255	Set the fade time to switch off. It will take the setting time to change value from 100% to 0%.
718	Enable relative dimming	-Disable -(Enable)	Disable: disable the relative dimming function Enable: enable the relative dimming function
719	Relative(4bits) dimming fade time (brightness 0%..100%/2..255s)	2..(5)..255	Set the fade time for relative dimming. It will takes the setting time to change value from 0%(100%) to 100%(0%).
720	Relative dimming is saved as the brightness of the switch	-No -(Yes)	No: when turn on light, the brightness will go to 100%. Yes: when turn on light, the brightness will go to last dimming brightness before turn off
721	Enable absolute dimming	-Disable -(Enable)	Disable: disable the absolute dimming function Enable: enable the absolute dimming function
722	Absolute(1byte) dimming fade time (brightness 0%..100%/0..255s)	0..(5)..255	Set the fade time for absolute dimming. It will takes the setting time to change value from 0%(100%) to 100%(0%).
723	Absolute dimming is saved as the brightness of the switch	-No -(Yes)	No: when turn on light, the brightness will go to 100%. Yes: when turn on light, the brightness will go to last brightness before turn off

4.4 A-D:function

No.	ETS-Parameter	Range (default)	Description
724	Enable function 'staircase light'	- (Disable) - Enable	Disable: the staircase light function is invalid Enable: the staircase light function is valid
725	Enable function 'flashing'	- (Disable) - Enable	Disable: the flashing function is invalid Enable: the flashing function is valid
726	Enable function 'scene'	- (Disable) - Enable	Disable: the scene function is invalid Enable: the scene light function is valid
727	Enable function 'threshold'	- (Disable) - Enable	Disable: the threshold function is invalid Enable: the threshold function is valid
728	Enable function 'heating'	- (Disable) - Enable	Disable: the heating function is invalid Enable: the heating light function is valid

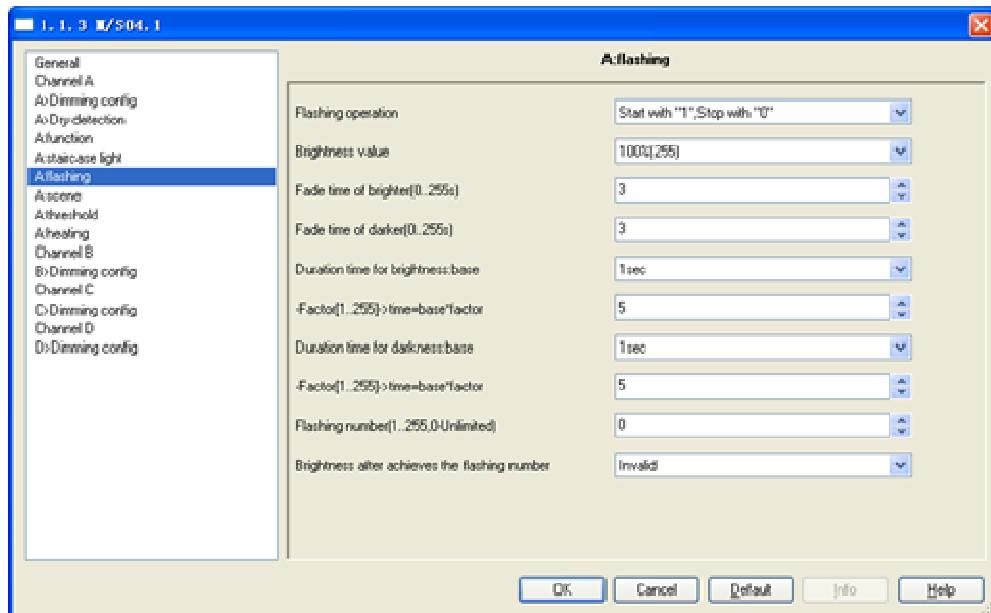

4.5 A-D:staircase light

No.	ETS-Parameter	Range (default)	Description
729	Staircase light operation	- (Start with "1", stop with "0") - Start with "1", invalid with "0" - Start with "1/0", can't stop	Start with "1", Stop with "0": When receives "1", run the staircase light; When receives 0, stop it. Start with "0", Stop with "1": when receives 0, run the staircase light; When receives 1, stop it. Start with "1/0", can't stop: whether receives 1 or 0, run the staircase light.
730	Brightness value	0%(0)..(100%(255))	Set the brightness value for staircase light.
731	Fade time of brighter(0...255s)	0..(3)..255	Set the fade time to switch on. It will take the setting time to change value

			from 0% to 100%.
732	Fade time of darker(0...255s)	0..(3)..255	Set the fade time to switch off. It will take the setting time to change value from 100% to 0%.
733	Duration time for brightness: base	-1sec -1min -1hour	Set the duration time for staircase light, it will auto off after this time. Duration time=base*factor.
734	Factor[1..255]->time=base*factor	1..(5)..255	Set the duration time for staircase light, it will auto off after this time. Duration time=base*factor.
735	Change staircase lighting time factor via bus	-Disable -Enable	Disable: Can't modify staircase light duration time factor via bus, only can be set in database. Enable: allow to modify staircase light duration time factor via bus.
736	Alarm staircase light via bus	-No) -Yes	NO: will not send out alarm telegram when trigger the staircase light YES: will send out alarm telegram when trigger the staircase light

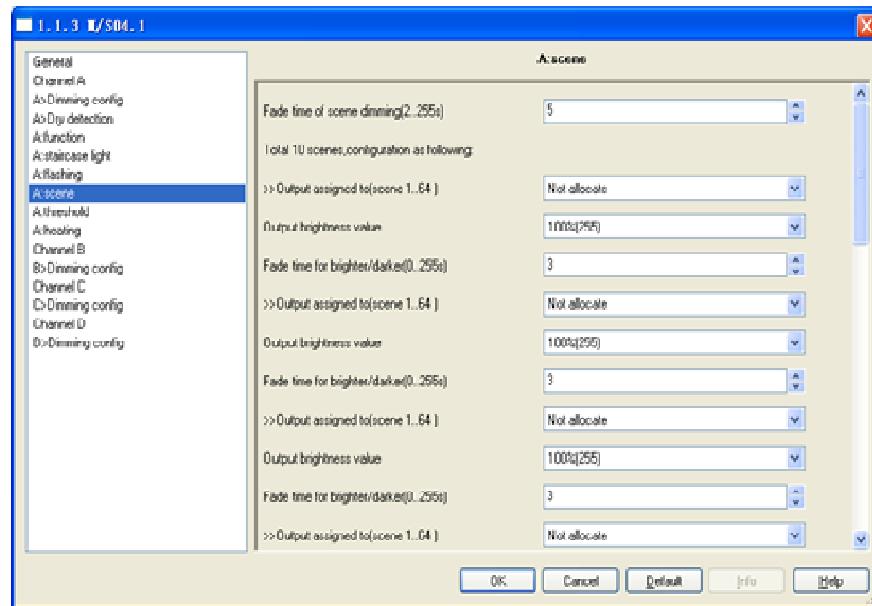

4.6 A-D:flashing

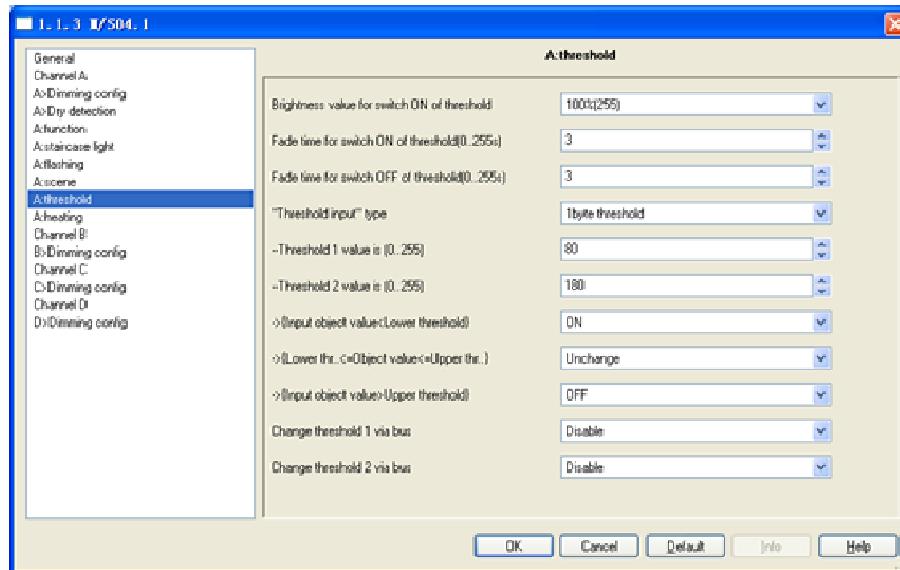

No.	ETS-Parameter	Range (default)	Description
737	Flashing operation	-Start with "1", stop with "0" -Start with "0", stop with "1" -Start with "1/0", can't stop	Start with "1", Stop with "0": When receives "1", run the flashing function; When receives 0, stop it. Start with "0", Stop with "1": when receives 0, run the flashing function; When receives 1, stop it. Start with "1/0", can't stop: whether receives 1 or 0, run the flashing function.
738	Brightness value	0%(0)..(100%)(255))	Set the brightness value for flashing
739	Fade time of	0..(3)..255	Set the fade time to switch on. It will

	brighter(0...255s)		take the setting time to change value from 0% to 100%.
740	Fade time of darker(0...255s)	0..(3)..255	Set the fade time to switch off. It will take the setting time to change value from 100% to 0%.
741	Duration time for brightness: base	-(1sec) -1min -1hour	Set the duration time for on, it will auto off after this time. Duration time=base*factor.
742	Factor[1..255]->time=base*factor	1..(5)..255	Set the duration time for on, it will auto off after this time. Duration time=base*factor.
743	Duration time for darkness: base	-(1sec) -1min -1hour	Set the duration time for off, it will auto on after this time. Duration time=base*factor.
744	Factor[1..255]->time=base*factor	1..(5)..255	Set the duration time for off, it will auto on after this time. Duration time=base*factor.
745	Flashing number (1...255, 0-Unlimited)	(0)..255	Set the flashing times, it will stop flashing after achieves this times. 0-unlimited.
746	Brightness after achieves the flashing number	-(Invalid) -0%(0)..100%(255)	Set the brightness after achieves the flashing times.

4.7 A-D:scene

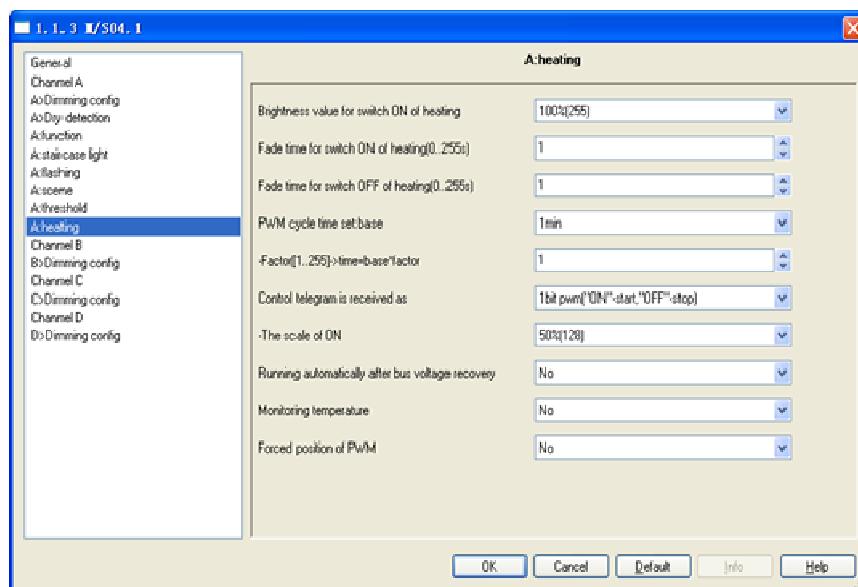

No.	ETS-Parameter	Range (default)	Description
747	Fade time of scene dimming: (2...255s)	2..(5)..255	Set the fade time for scene dimming
748	10x Output assigned to(scene 1..64)	- (Not allocated) - Scene NO.1..Scene NO.64	Allocate the scenes for different steps
749	Output brightness value	-0%(0)..(100%(255))	Set the channel output brightness value for a certain scene
750	Fade time for brighter/darker (0...255s)	0..(3)..255	Set the fade time for the scene, it will take the setting time to change from one scene to another

4.8 A-D:threshold

No.	ETS-Parameter	Range (default)	Description
751	Brightness value for switch ON of threshold	0%(0)..(100%(255))	<i>Set the brightness for switch on of threshold</i>
752	Fade time for switch ON of threshold (0...255s)	0..(3)..255	<i>Set the fade time to switch on, it will takes the setting time to change value from 0% to 100%.</i>
753	Fade time for switch OFF of threshold (0...255s)	0..(3)..255	<i>Set the fade time to switch off. It will takes the setting time to change value from 100% to 0%.</i>
754	'Threshold input' type	- (1byte threshold) - 2bytes threshold	<i>Set the type of threshold.</i>
755	Threshold 1 value is (0...255)	0..(80)..255	<i>Set threshold 1 value</i>
756	Threshold 1 value is (0...65535)	0..(10000)..65535	<i>Set threshold 1 value</i>
757	Threshold 2 value is (0...255)	0..(180)..255	<i>Set threshold 2 value</i>
758	Threshold 2 value is (0...65535)	0..(30000)..65535	<i>Set threshold 2 value</i>
759	(Input object value < Lower threshold)	- Unchange - (ON) - OFF	<i>If input value < lower threshold, the switch will do the action according to below setting:</i> Unchange: The channel switch position will not change. ON: The channel switch position will set to ON. OFF: The channel switch position will set to OFF
760	(Lower threshold <= Input value <= Upper threshold)	- (Unchange) - ON - OFF	<i>If lower threshold <= input value <= upper threshold, the switch will do the action according to below setting:</i> Unchange: The channel switch position will not change. ON: The channel switch position will

			<i>set to ON. OFF: The channel switch position will set to OFF</i>
761	(Input value>Upper threshold)	-Unchange -ON -(OFF)	<i>If upper threshold <input value, the switch will do the action according to below setting: Unchange: The channel switch position will not change. ON: The channel switch position will set to ON. OFF: The channel switch position will set to OFF</i>
762	Change threshold 1 via bus	-(Disable) -Enable	Disable: do not allow to change the threshold 1 value from bus. Enable: Allow to change the threshold 1 value from bus.
763	Change threshold 2 via bus	-(Disable) -Enable	Disable: do not allow to change the threshold 2 value from bus. Enable: Allow to change the threshold 2 value from bus.

4.9 A-D:heating

No.	ETS-Parameter	Range (default)	Description
764	Brightness value for switch ON of heating	0%(0)..(100%(255))	<i>Set the brightness(working power)for switch on of heating</i>
765	Fade time for switch ON of heating (0...255s)	0..(1)..255	<i>Set the fade time to switch on, it will takes the setting time to change value from 0% to 100%.</i>
766	Fade time for switch OFF of heating (0...255s)	0..(1)..255	<i>Set the fade time to switch off. It will takes the setting time to change value from 100% to 0%.</i>
767	PWM cycle time set: base	-(1min) -1hour	<i>Set the PWM cycle time, the cycle time =base*factor</i>
768	Factor[1..255]->time=base*factor	(1)..255	<i>Set the PWM cycle time, the cycle time =base*factor</i>

769	Control telegram is received as	-1bit pwm(ON-start/OFF-stop) -1byte("255"-ON/"0"-OFF/other valve)	1bit PWM(1-start/0-stop): when receives 1, will switch on for heating; when receives 0, will switch off. 1byte(255-ON/0-OFF/other valve): will switch on for heating when receives 255; will switch off when receives 0 ; will open to the corresponding pulse width of PWM according to the value of receiving other value (1-254)
770	The scale of ON	0%(OFF)..(50%(128)..100%(ON)	Set the pulse width of PWM to work for 1 bit PWM
771	Running automatically after bus voltage recovery	-(No) -Defined valve -Recovery	NO: will not run automatically Defined value: open to the defined pulse width of PWM Recovery: will recovery to the corresponding position before power off
772	Position of the valve	0%(OFF)..(50%(128)..100%(ON)	Set the pulse width of PWM for defined value
773	Monitoring temperature	-(No) -Yes	No: will not monitor the temperature Yes: will monitor the temperature
774	Monitor cycles(1..255min)	0..(5)..255	Set the time interval to monitor the temperature
775	Get temperature from (If local, input select temperature detection)	-(Local) -Bus	Set the temperature source for heating Local: need to connect temperature sensor for the current input channel to detect temperature Bus: read temperature from another device
776	Bus temperature compensation(-5C..+5C)	-5C..(0C)..+5C	Set the compensation value to correct the temperature
777	Temperature >= Threshold1(-30C..+50C)	-30..(30)..50	Set the temperature threshold 1 value
778	Temperature <= Threshold2(-30C..+50C)	-30..(20)..50	Set the temperature threshold 2 value
779	Temperature threshold1 operation	-Invalid -ON and start PWM -(OFF and stop PWM)	Set the action when temperature reaches to the threshold 1 value Invalid: no action ON and start PWM: will switch on and start PWM OFF and stop PWM: will switch off and stop PWM
780	Temperature threshold1 alarm	-(No) -Yes	Set to alarm or not when temperature reaches to the threshold 1 value No: will not alarm Yes: will send alarm telegram to bus
781	Temperature threshold2 operation	-Invalid -(ON and start PWM) -OFF and stop PWM	Set the action when temperature reaches to the threshold 2 value Invalid: no action ON and start PWM: will switch on and start PWM OFF and stop PWM: will switch off and stop PWM
782	Temperature threshold2 alarm	-(No) -Yes	Set to alarm or not when temperature reaches to the threshold 2 value No: will not alarm

Yes: will send alarm telegram to bus			
783	Forced position of PWM	-No) -Yes	No: can not forced control when running Yes: set the position for forced control. when receives forced control telegram, it will go to the setting position.

XX

D. Communication Objects ('Electronic switch' adjustment)

D.0 General

Objects "General" and Enable of "Input A"												
Number	Name	Object Function	D..	G..	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
NO.	Object name	Function	Flags			Data type						
0	General	Heartbeat telegram	C T			DPT 1.003 1bit						
This communication object is always active and valid. Invert the value send telegram to bus in next frame. e.g. last telegram value is "1", the next telegram value is "0"												
10	Input A	1-Enable,/0-disable	C W			DPT 1.003 1bit						
This communication object is used to enable/disable the input A. when receive the telegram 1, enable the input A function, when received the telegram 0 , disable the input A function.												

D.1 Dry contact sensor

Objects "Switch controller"												
Number	Name	Object Function	D..	G..	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A (short)	Switching			1 bit	C	-	W	T	U		Low
12	Input A (long)	Switching			1 bit	C	-	W	T	U		Low
NO.	Object name	Function	Flags			Data type						
11	Input A(short)	switching	C W T U			DPT 1.001 1bit						
12	Input A(long)	switching	C W T U			DPT 1.001 1bit						
These communication objects are for switching control. when short/long press the dry contact A, it will send telegrams to bus to control the output.												

Objects "Switch/Dimming controller"												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram	1 bit	C	-	-	T	-	-	-	Low	
10	Input A	'1'-Enable/'0'-Disable	1 bit	C	-	W	-	-	-	-	Low	
11	Input A (short)	Switching	1 bit	C	-	W	T	U	-	-	Low	
12	Input A (long)	Dimming	4 bit	C	-	-	T	-	-	-	Low	

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Switching	C W T U	DPT 1.001 1 bit
12	Input A(long)	Dimming	C T	DPT 3.007 4 bit

These communication objects are for relative dimming control.short press to on/off the dimmer; long press to dim the dimmer.

Objects "shutter controller"												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram	1 bit	C	-	-	T	-	-	-	Low	
10	Input A	'1'-Enable/'0'-Disable	1 bit	C	-	W	-	-	-	-	Low	
11	Input A (short)	Adjust for shutter(Inc)	1 bit	C	-	W	T	U	-	-	Low	
12	Input A (long)	Move for shutter(Toggle)	1 bit	C	-	W	T	U	-	-	Low	

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Adjust for shutter(Inc)	C W T U	DPT 1.007 1 bit
12	Input A(long)	Move for shutter(Toggle)	C W T U	DPT 1.007 1 bit

These communication objects are for shutter control.short press to stop the shutter/adjust the louver; long press to move up/down the shutter.

Objects "Flexible controller"												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram	1 bit	C	-	-	T	-	-	-	Low	
10	Input A	'1'-Enable/'0'-Disable	1 bit	C	-	W	-	-	-	-	Low	
11	Input A	Flexible	1 bit	C	-	W	T	W	-	-	Low	

NO.	Object name	Function	Flags	Data type
11	Input A	Flexible	C W T U	DPT 1.001 1 bit

This communication object is for flexible control. when control the dry contact, it will sends the defined value "1"or"0" to bus

Objects „Scene controller“												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram	1 bit	C	-	-	T	-	-	-	Low	
10	Input A	'1'-Enable/'0'-Disable	1 bit	C	-	W	-	-	-	-	Low	
11	Input A (short)	Call scene	1 byte	C	-	W	T	U	-	-	Low	
12	Input A (long)	Scene dimming	4 bit	C	-	-	T	-	-	-	Low	

NO.	Object name	Function	Flags	Data type
-----	-------------	----------	-------	-----------

11	Input A(short)	Call scene	C W T U	DPT 18.001 1 byte
12	Input A(long)	Scene dimming	C T	DPT 3.007 4 bit

These communication objects are for scene control. short press to call scene; long press to dim the scene

Objects „Sequence controller“												
Number	Name	Object Function	D...	G..	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A (short)	Sequence			1 bit	C	-	W	T	U		Low
12	Input A (long)	Sequence			1 bit	C	-	W	T	U		Low

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Sequence	C W T U	DPT 1.010 1 bit
12	Input A(long)	Sequence		

These communication object is for sequence control. Short/long press can trigger different sequence

Objects „Percentage controller“												
Number	Name	Object Function	D...	G..	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A (short)	Percentage			1 Byte	C	-	W	T	U		Low
12	Input A (long)	Percentage			1 Byte	C	-	W	T	U		Low

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Percentage	C W T U	DPT 5.001 1 byte
12	Input A(long)	percentage		

These communication objects are for sequence control. Short/long press can send out different percentage value

Objects “Threshold controller”												
Number	Name	Object Function	D...	G..	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A (short)	Threshold(1byte)			1 Byte	C	-	W	T	U		Low
12	Input A (long)	Threshold(1byte)			1 Byte	C	-	W	T	U		Low

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Threshold (1bytes)	C W T U	DPT 5.004 2 bytes
12	Input A(long)	Threshold (1byte)		

These communication objects are for threshold control. Short/long press can send out different threshold value

Objects „String (14bytes) controller“												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A (short)	String(14bytes) value			14 Byte	C	-	-	T	-		Low
12	Input A (long)	String(14bytes) value			14 Byte	C	-	-	T	-		Low

NO.	Object name	Function	Flags	Data type
11	Input A(short)	String(14 bytes) value	C T	DPT 16.000 2 bytes
12	Input A(long)	String(14 bytes) value	C T	DPT16.000 1 byte

These communication objects are for string control. Short/long press can send out different string content

Objects „Forced position controller“												
Number	Name	Object Function	D...	Group Add...	Length	C	R	W	T	U	Data Type	Pri
0	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
10	Input A	Disable/Enable			1 bit	C	-	W	-	-	1 bit DPT_Enable	Low
11	Input A (closed)	Forced value (temperature)			2 Byte	C	-	W	T	U	2 byte float v...	Low
12	Input A (opened)	Forced value (0...255)			1 Byte	C	-	W	T	U		Low

NO.	Object name	Function	Flags	Data type
11	Input A(short)	Forced value (temperature)	C W T U	DPT 5.004 2 bytes
12	Input A(long)	Forced value (0...255)	C W T U	DPT 7.001 1 byte

These communication objects are for forced value control. Short/long press can send out different control value

Objects „Counter controller“												
Number	Name	Object Function	D...	G...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram			1 bit	C	-	-	T	-		Low
10	Input A	'1'-Enable/'0'-Disable			1 bit	C	-	W	-	-		Low
11	Input A	Counter (0...255)			1 Byte	C	-	W	T	U		Low
12	Input A	Set counter end(0...255)			1 Byte	C	-	W	-	U		Low
13	Input A	Set counter (0...255)			1 Byte	C	-	W	-	U		Low

NO.	Object name	Function	Flags	Data type
11	Input A	Counter (0...255)	C W T U	DPT 5.004 1 byte
12	Input A	Set counter end(0...255)	C W U	DPT 5.004 1 byte
13	Input A	Set counter (0...255)	C W U	DPT 5.004 1 byte

These communication objects are for counter control. Use object 11 to start the counter function, use object 12 to set the end of the counter; use object 13 to set the start of the counter

Objects „Combination controller“

Number	Name	Object Function	D...	Group...	Length	C	R	T	V	Data Type	Priority	
10	Input A	Disposable			1 bit	C	-	T	-	1 bit DPT_Enable	Low

		COMB OBJ1 Threshold(0...65535)	C T	DPT 7.001 2 byte
		COMB OBJ1 String (14 bytes)	C T	DPT 16.000 14 byte

These communication objects are for combination control. it contains switch, shutter, scene, sequence, percentage, threshold, string(14 bytes) controller, long press to send out these control telegrams

D.2 Temperature sensor

Objects „Switch controller“													
Number	Name	Object Function	D...	Gruppe	Length	C	R	W	T	U	Data Type	Priority	
10	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low	
11	Input A	Temperature Report			2 Byte	C	R	-	T	-	2 byte float v...	Low	
12	Input A	Switching			1 bit	C	-	W	T	U	1 bit DPT_Switch	Low	
13	Input A	Change temperature threshold1			2 Byte	C	-	W	-	U	2 byte float v...	Low	
13	Input A	Change temperature threshold2			2 Byte	C	-	W	-	U	2 byte float v...	Low	
14	Input A	Forced switching			1 bit	C	-	W	-	U	1 bit DPT_Switch	Low	

NO.	Object name	Function	Flags	Data type
11	Input A	Switching	C W T U	DPT 1.001 1 bit
12	Input A	Change temperature threshold 1/2	C W U	DPT 9.001 2 byte
14	Input A	Forced switching	C W U	DPT 9.001 1 bit

These communication objects are for switch control. when temperature in the range, object 11 will send out the switch telegram to bus. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced switch control, then the temperature control will be invalid.

Objects „Alarm controller“													
Number	Name	Object Function	D...	Gruppe	Length	C	R	W	T	U	Data Type	Priority	
10	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low	
11	Input A	Temperature Report			2 Byte	C	R	-	T	-	2 byte float v...	Low	
11	Input A	Alarm			1 bit	C	-	W	T	U	1 bit DPT_Alarm	Low	
12	Input A	Change temperature threshold1			2 Byte	C	-	W	-	U	2 byte float v...	Low	
13	Input A	Change temperature threshold2			2 Byte	C	-	W	-	U	2 byte float v...	Low	
14	Input A	Forced alarm			1 bit	C	-	W	-	U	1 bit DPT_Alarm	Low	

NO.	Object name	Function	Flags	Data type
11	Input A	Alarm	C W T U	DPT 1.005 1 bit
12	Input A	Change temperature threshold 1/2	C W U	DPT 9.001 2 byte
14	Input A	Forced alarm	C W U	DPT 1.001 1 bit

These communication objects are for alarm control. when temperature in the range, object 11 will send out the alarm telegram to bus. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced alarm control, then the temperature control will be invalid.

Objects „Shutter controller“

	Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priori
	0	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
NO.	Object name	Function	Flags						Data type				
11	Input A	Move for shutter	C W T U						DPT 1.008 1 bit				
12	Input A	Change temperature threshold1	C W U						DPT 9.001 2 byte				
13	Input A	Change temperature threshold2	C W U						DPT 1.001 1 bit				
14	Input A	Forced move	C W U						DPT 1.008 1 bit				

These communication objects are for shutter control. when temperature in the range, object 11 will send out the up/down telegram to bus. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced moving control, then the temperature control be will invalid.

Objects „Scene controller“													
	Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priori
	0	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
NO.	Object name	Function	Flags						Data type				
11	Input A	Call scene	C W T U						DPT 18.001 1 bit				
12	Input A	Change temperature threshold1	C W U						DPT 9.001 2 byte				
13	Input A	Change temperature threshold2	C W U						DPT 1.001 1 bit				
14	Input A	Forced scene	C W U						DPT 1.008 1 bit				

These communication objects are for scene control. when temperature in the range, object 11 will call the setting scene. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced scene control, then the temperature control will be invalid.

Objects „Sequence controller“													
	Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priori
	0	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
NO.	Object name	Function	Flags						Data type				
11	Input A	Sequence	C W T U						DPT 1.010 1 bit				
12	Input A	Change temperature threshold1	C W U						DPT 9.001 2 byte				
13	Input A	Change temperature threshold2	C W U						DPT 1.001 1 bit				
14	Input A	Forced sequence	C W U						DPT 1.008 1 bit				

										1 bit
<i>These communication objects are for sequence control. when temperature in the range, object 11 will call the setting sequence. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced sequence control, then the temperature control will be invalid.</i>										

Objects „Percentage controller“												
Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priority
10	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
110	Input A	Temperature Report			2 Byte	C	R	-	T	-	2 byte float w...	Low
111	Input A	Percentage			1 Byte	C	-	Y	T	U	8 bit unsigned...	Low
112	Input A	Change temperature threshold1			2 Byte	C	-	Y	-	U	2 byte float w...	Low
113	Input A	Change temperature threshold2			2 Byte	C	-	Y	-	U	2 byte float w...	Low
114	Input A	Forced percentage			1 bit	C	-	Y	-	U	1 bit DPT_Switch	Low

NO.	Object name	Function	Flags	Data type
11	Input A	Percentage	C W T U	DPT 5.001 1 byte
12	Input A	Change temperature threshold 1/2	C W U	DPT 9.001 2 byte
14	Input A	Forced percentage	C W U	DPT 1.001 1 bit

These communication objects are for percentage control. when temperature in the range, object 11 will send out the setting percentage value. Use object 12 to change the threshold 1 value, object 13 to change the threshold 2 value; use object 14 for forced percentage control, then the temperature control will be invalid.

Objects „Threshold controller“												
Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priority
10	General	Heartbeat telegram	1/2/3		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
110	Input A	Temperature Report			2 Byte	C	R	-	T	-	2 byte float w...	Low
111	Input A...	Threshold value (byte)			1 Byte	C	-	Y	T	U	8 bit unsigned...	Low
112	Input A	Change temperature threshold1			2 Byte	C	-	Y	-	U	2 byte float w...	Low
113	Input A	Change temperature threshold2			2 Byte	C	-	Y	-	U	2 byte float w...	Low
114	Input A	Forced threshold value			1 bit	C	-	Y	-	U	1 bit DPT_Switch	Low

NO.	Object name	Function	Flags	Data type
11	Input A	Threshold value(1 byte)	C W T U	DPT 5.001 1 byte
12	Input A	Change temperature threshold 1/2	C W U	DPT 9.001 2 byte
14	Input A	Forced threshold value	C W U	DPT 1.001 1 bit

These communication objects are for threshold control. when temperature in the range, object 11 will send out the setting threshold value. Use object 12 to change the temperature threshold 1 value, object 13 to change the temperature threshold 2 value; use object 14 for forced threshold control, then the temperature control will be invalid.

Objects „String (14bytes) controller

Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram		1/2/3	1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
NO.	Object name	Function	Flags						Data type			
10	Input A	Temperature Report	C R - T - U						2 byte float v...			
11	Input A	String(14bytes) value	C - - T - U						Character stri...			
12	Input A	Change temperature threshold1	C - W T - U						2 byte float v...			
13	Input A	Change temperature threshold2	C - W T - U						2 byte float v...			
14	Input A	Forced string	C - W T - U						1 bit DPT_Switch			

These communication objects are for string control. when temperature in the range, object 11 will send out the setting string content. Use object 12 to change the temperature threshold 1 value, object 13 to change the temperature threshold 2 value; use object 14 for forced string control, then the temperature control will be invalid.

Objects „Forced position controller“												
Number	Name	Object Function	D...	Group...	Length	C	R	W	T	U	Data Type	Priority
0	General	Heartbeat telegram		1/2/3	1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
10	Input A	Temperature Report			2 Byte	C	R	-	T	-	2 byte float v...	Low
11	Input A...	Forced value(2bits)			2 bit	C	-	W	T	U	1 bit controll...	Low
12	Input A...	Forced value(2bits)			2 bit	C	=	W	T	U	1 bit controll...	Low
13	Input A	Change temperature threshold1			2 Byte	C	-	W	-	U	2 byte float v...	Low
14	Input A	Change temperature threshold2			2 Byte	C	-	W	-	U	2 byte float v...	Low
NO.	Object name	Function	Flags						Data type			
11	Input A	Forced value(2 bits)	C W U						DPT 2.001			
12	(in range/TEMP THR1)/ (out range/TEMP THR2)								2 bit			
13	Input A	Change temperature threshold 1/2	C W U						DPT 9.001			
14									2 byte			

These communication objects are for forced position control. Use object 11 to send out forced control telegram when temperature in range or on the threshold 1 value, object 12 to send out forced control telegram when temperature out of range or on the threshold 2 value; Use object 13 to change the temperature threshold 1 value, object 14 to change the temperature threshold 2 value.

Objects „Combination controller“

Number	Name	Object Function	D...	Length	C	R	W	T	U	Data Type	Pri
0	General	Heartbeat telegram		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low

NO.	Object name	Function	Flags			Data type					
10	Logic A	Dry contact status report	C R T			DPT 1.002 1 bit					
This communication object is for dry contact status report. It will report its status to the bus when open/closed.											
11 ... 15	Logic A	Extern telegram<1> ... Extern telegram<5>	C W U			DPT 1.001 1bit DPT 4.001 1 byte DPT 7.001 2 byte DPT 12.001 4 byte					
These communication objects are for external conditions of logic, these external telegram are provided by another devices in the system											
		Switching controller	C W T U			DPT 1.001 1bit					
		Alarm controller	C W T U			DPT 1.005 1bit					

16 ... 25	Logic A:1 ... Logic A:10	Shutter controller	C W T U	DPT 1.008 1bit
		Scene controller	C W T U	DPT 18.001 1byte
		Sequence controller	C W T U	DPT 1.010 1bit
		Percentage (0%..100%)	C W T U	DPT 5.001 1byte
		Threshold (0...255)	C W T U	DPT 5.004 1byte
		String(14bytes)	C W T U	DPT 7.001 2 byte

Set the outputs for true logic, logic A :1 to logic A:10, contains the control type about switching, alarm, shutter, scene, sequence, percentage, string (14 bytes).

Logical B, logical C, logical D are same as logic A.

136	Logic E:1	switching	C W T U	DPT 1.001 1 bit
		Alarm	C W T U	DPT 1.005 1 bit
		shutter	C W T U	DPT 1.008 1 bit
		scene	C W T U	DPT 18.001 1 byte
		Sequence	C W T U	DPT 1.010 1 bit
		Percentage (0%..100%)	C W T U	DPT 5.001 1 byte
		Threshold (0-255)	C W T U	DPT 5.004 1 byte
		Threshold (0-65535)	C W T U	DPT 7.001 1 byte
		String (14 bytes)	C W T U	DPT 16.000 14 byte

logic A-D logic status consist of the logic E's input, logic E will send out these control telegrams when true.

D.4 Dimming controller

Objects „General“											
Number	Name	Object Function	R..	Length	C	R	W	T	U	Data Type	Priority
10	General	Heartbeat telegram		:1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
15	General	Sequence 1		1 bit	C	-	V	-	V	1 bit DPT_Start	Low
16	General	Sequence 2		1 bit	C	-	V	-	V	1 bit DPT_Start	Low
17	General	Sequence 3		1 bit	C	-	V	-	V	1 bit DPT_Start	Low
18	General	Sequence 4		1 bit	C	-	V	-	V	1 bit DPT_Start	Low
19	General	Sequence 5		1 bit	C	-	V	-	V	1 bit DPT_Start	Low
NO.	Object name	Function	Flags			Data type					
5	General	Sequence 1 ...Sequence 5	C W U			DPT 1.010 1 bit					

These communication objects are for sequence output. The sequence will be controlled to stop/start when receive the 0/1 value

Objects „Output A“

Number	Name	Object Function	D..	Length	C	R	W	T	U	Data Type	Prior
0	General	Heartbeat telegram		1 bit	C	-	-	T	-	1 bit DPT_Enable	Low
10	Output A	Channel output		1 bit	C	-	W	-	U	1 bit DPT_Switch	Low
13	Output A	Response status(1bit)		1 bit	C	R	-	T	-	1 bit DPT_Switch	Low
14	Output A	Response status(1byte)		1 Byte	C	R	-	T	-	8 bit unsigned...	Low
15	Output A	SYNC control relay		1 bit	C	-	-	T	-	1 bit DPT_Switch	Low
17	Output A	R/W total ON time		2 Byte	C	R	W	T	U		Low
18	Output A	Alarm when total ON time out		1 bit	C	R	-	T	-		Low
19	Output A	Staircase light		1 bit	C	-	W	-	U	1 bit DPT_Switch	Low
20	Output A	Change staircase light factor		1 Byte	C	-	W	-	U		Low
21	Output A	Alarm staircase light		1 bit	C	R	-	T	-		Low
22	Output A	Flashing		1 bit	C	-	W	-	U	1 bit DPT_Switch	Low
23	Output A	Scene(8bit)		1 Byte	C	-	W	-	U		Low
24	Output A	Scene dimming(4bit)		4 bit	C	-	W	-	U	3 bit controll...	Low
25	Output A	Threshold input		1 Byte	C	-	W	-	U		Low
26	Output A	Change threshold 1		1 Byte	C	-	W	-	U		Low
27	Output A	Change threshold 2		1 Byte	C	-	W	-	U		Low
28	Output A (PWM)	Heat with 1bit control		1 bit	C	-	W	-	U	1 bit DPT_Switch	Low
31	Output A (PWM)	TEMP threshold2 alarm		1 bit	C	R	-	T	-		Low
32	Output A (PWM)	Forced position		1 bit	C	-	W	-	U	1 bit DPT_Switch	Low

NO.	Object name	Function	Flags	Data type
10	Output A	Channel output	C W U	DPT 1.001 1 bit

This communication object is for switch output. The output A will be controlled to on/off when receive the 0/1 value

13 ... 27	Output A	Response status(1 bit)	C R T	DPT 1.001 1 bit
		Response status(1byte)	C R T	DPT 5.001 1 byte
		SYNC control relay	C T	DPT 1.001 1 bit
		Temperature report	CRT	DPT 9.001 2 byte
		R/W total ON time	CRWTU	DPT 7.007 1 bit
		Alarm when total ON time out	CRT	DPT 1.005 1 bit
		Staircase light	CWU	DPT 1.001 1 bit
		Change staircase light factor	CWU	DPT 5.004 1 byte
		Alarm staircase light	CRT	DPT 1.005 1 bit
		Flashing	C WU	DPT 1.001 1 bit
		Scene(8 bit)	C WU	DPT 18.001 1 byte
		Scene dimming(4 bit)	C WU	DPT 3.007

				4 bit
		Threshold input	C WU	DPT 5.004 1 byte
		Change threshold 1	C WU	DPT 5.004 1 byte
		Change threshold 1	C WU	DPT 5.004 1 byte
<i>These communication objects are for channel output A's function control.</i>				
28 ... 32	Output A (PWM)	Heat with 1 bit control	CWU	DPT 1.001 1 bit
		TEMP threshold2 alarm	CRT	DPT 1.005 1 bit
		Forced position	CWU	DPT 1.001 1 bit
<i>These communication objects are for combination control, Note: Output B,C,D 's setting are all same as output A.</i>
